Resources Overview

Universal Controller resources are records that both define your Universal Automation Center system and that you set up to help facilitate operations:

| | |
|-----------------------|--|
| Agents | <p>Universal Agents, running programs on one or more remote machines, connected to the Controller via Universal Message Service (OMS):</p> <ul style="list-style-type: none"> • Linux/Unix • Windows • z/OS |
| Agent Clusters | Groups of Agents from which the Controller uses pre-defined parameters to select the most appropriate agent for a task. |
| OMS Servers | Network communication provider between Universal Controller 6.3.x and Universal Agent. |
| Cluster Nodes | Controller instances. |
| Virtual Resources | Allow you to create throttling schemes for tasks. |
| Scripts | Allow you to execute scripts stored in the Controller database. |
| Email Templates | Allow you to construct information that can be copied to create Email tasks . |
| Email Connections | Provide email server information required for the Controller to send an email. |
| Database Connections | Provide database server information required for running SQL tasks and Stored Procedure tasks . |
| SAP Connections | Provide SAP server information required for running SAP tasks . |
| SNMP Managers | Allow you to generate SNMP notifications . |
| Application Resources | Define the names of applications being monitored. |

Agents

- Agents

- Resetting the Current Task Count
- Sending Notifications on Status of an Agent
 - Email Notification Details
 - Email Notification Details Field Descriptions
 - SNMP Notification Details
 - SNMP Notification Details Field Descriptions

Agents

Agent resources refer to Universal Agents, running programs on one or more remote machines, connected to the Controller via Universal Message Service (OMS).

OMS must be running in order for you to run tasks on an Agent.

There are three types of Agents:

- Linux/Unix Agent
- Windows Agent
- z/OS Agent

Displaying Agent Details

When you start an Agent for the first time, the Controller automatically creates a database record for that Agent. You can view these records for details and status information.

(You also can view status information about Agents from the [Command Line Interface \(CLI\)](#).)

Step 1 From the [Agents & Connections](#) navigation pane, select **Agents > All Agents** or **Agents > <type of agent>**. An Agents list displays:

| Agent Name | Host Name | Agent Id | Version | Last Heartbeat | Current Task Count | Suspended | Status | Started Date |
|--|--------------------------|-------------|----------|---------------------------|--------------------|--------------------------|---------|--------------|
| aix61.stone.branch - AIX61 | aix61.stone.branch | AIX61 | 6.3.0.1 | 2016-04-28 09:33:09 -0400 | | <input type="checkbox"/> | Active | |
| centerpoint.stone.branch - centerpoint | centerpoint.stone.branch | centerpoint | 6.2.0.0 | 2016-04-28 09:33:52 -0400 | | <input type="checkbox"/> | Active | |
| db2.stone.branch - QADB2 | db2.stone.branch | QADB2 | 6.2.0.0 | 2016-04-28 09:34:58 -0400 | | <input type="checkbox"/> | Active | |
| db3.stone.branch - QADB3 | db3.stone.branch | QADB3 | 6.2.0.0 | 2016-04-28 09:33:04 -0400 | | <input type="checkbox"/> | Active | |
| db5.stone.branch - QADB5 | db5.stone.branch | QADB5 | 6.2.0.0 | | | <input type="checkbox"/> | Offline | |
| ln26rh4-x64.stone.branch - LXRH4X64 | ln26rh4-x64.stone.branch | LXRH4X64 | 5.2.0.11 | 2016-04-28 09:33:14 -0400 | | <input type="checkbox"/> | Active | |
| lx3ora7-x64.stone.branch - LX3ORA7X64 | lx3ora7-x64.stone.branch | LX3ORA7X64 | 5.2.0.11 | 2016-04-28 09:33:40 -0400 | | <input type="checkbox"/> | Active | |
| lx3rh7-x64.stone.branch - LX3RH7X64 | lx3rh7-x64.stone.branch | LX3RH7X64 | 6.3.0.1 | 2016-04-28 09:34:41 -0400 | | <input type="checkbox"/> | Active | |
| lx3rh7c-x64.stone.branch - LX3RH7CX64 | lx3rh7c-x64.stone.branch | LX3RH7CX64 | 6.3.0.0 | 2016-04-28 09:34:57 -0400 | | <input type="checkbox"/> | Active | |

See [Agents List Field Descriptions](#), below, for a description of the columns on an Agent List.

Step 2 To display Details about an Agent on the list, click the icon next to the **Agent Name** or click anywhere in the Agent row.

Most fields are display-only; however, you can make the following changes:

1. Add a [Member of Business Services](#).
2. Assign [Credentials](#).
3. Change the [heartbeat interval](#). The heartbeat is a status message sent from the Agent to the Controller.
4. Change the default [Log Level](#).
5. Select whether or not to apply a [Task Execution Limit](#) (and [Limit Amount](#)) on the Agent.

You also can choose to:

- Temporarily [suspend](#) the agent's ability to run tasks.

Agents List Column Descriptions

The following table describes the default display columns on an Agents list.

| Column | Description |
|------------|--|
| Agent Name | User-defined during installation; name used within the Controller to identify this Agent. |
| Host Name | User-provided during installation; IP address or domain/name of the host machine where the resource resides. |
| Type | Agent's platform: Linux/Unix, Windows, or z/OS. |
| Agent ID | Unique ID for this Agent, created during installation. |
| Version | System-supplied; version number of the Agent program. |

| | |
|--------------------|---|
| Last Heartbeat | System-supplied; date and time the most recent heartbeat was received from the resource. |
| Current Task Count | System supplied; current number of tasks currently being run by this Agent. |
| Suspended | Specification (true or false) for whether or not this Agent has been suspended from the ability to run tasks. |
| Status | System-supplied; status of the Agent. <ul style="list-style-type: none"> • Active: the Agent is running. • Offline: the Agent is not running. |
| Updated By | User that last updated this record. |
| Updated | Date when this record was last updated. |

Agent Details Field Descriptions

Detailed descriptions of the fields in the Agent Details are provided for each [type of Agent](#).

Starting and Stopping Agents

For instructions on starting and stopping Agents, see [Starting and Stopping Agent Components](#).

Suspending Agents, Agent Clusters, and Agent Cluster Memberships

If an Agent or [Agent Cluster](#) reaches its Task Execution Limit, all new work queued against that Agent or Agent Cluster will transition into the [Execution Wait](#) status until the Current Task Count falls below the Limit Amount.

You also can manually suspend (and resume) Agents and Agent Clusters, as well as Agent memberships in Agent Clusters.

Note

The following [roles and permissions](#) are required to suspend/resume Agents, Agent Clusters, and Agent Cluster Memberships:

- Agent Suspend/Resume requires the **ops_admin role** and the appropriate [Agent permissions](#) for Agent Suspend/Resume commands.
- Agent Cluster Suspend/Resume and Agent Cluster Membership Suspend/Resume require the **ops_agent_cluster_admin** role.

Suspending an Agent

You can temporarily suspend the ability of an Agent to run tasks from the Agent list or the Agent Details for that Agent. Any tasks queued against a suspended Agent will transition into Execution Wait status until the Agent has been resumed.

- To suspend an Agent from the [Agents list](#), either:
 - Right-click the **Agent Name** of the Agent to be suspended and, on the [Action menu](#), click **Suspend Agent**.
 - Click the box to the left of the **Agent Name** and, from the **Action on selected rows...** drop-down list at the bottom of the page, click **Suspend Agent**.
- To suspend an Agent from the [Agent Details](#), click the **Suspend Agent** button. A **Resume Agent** button replaces the **Suspend Agent** button.

Resuming an Agent

(To end the suspension, and resume the ability of an Agent to run tasks, either:

- Click **Resume Agent** on the [Action menu](#) or from the **Action on selected rows...** drop-down list.
- Click the **Resume Agent** button.

Suspending an Agent Cluster

You can temporarily suspend the ability of a cluster of Agents to run tasks from the Agent Clusters list or an Agent Cluster Details. Any tasks

queued against a suspended agent cluster will transition into Execution Wait status until the agent cluster has been resumed.

- To suspend an Agent Cluster from the [Agent Clusters list](#), either:
 - Right-click the **Cluster Name** of the agent cluster to be suspended and, on the [Action menu](#), click **Suspend Agent Cluster**.
 - Click the box to the left of the agent cluster. From the **Action on selected rows...** drop-down list at the bottom of the page, click **Suspend Agent**.
- To suspend an Agent Cluster from an [Agent Cluster Details](#), click the **Suspend Cluster** button. A **Resume Cluster** button replaces the "Suspend Cluster" button.

Resuming an Agent Cluster

To end the suspension, and resume the ability of a cluster of Agents to run tasks, either:

- Click **Resume Agent Cluster** on the [Action menu](#) or from the **Action on selected rows...** drop-down list.
- Click the **Resume Cluster** button.

Suspending an Agent Cluster Membership

You can temporarily suspend the membership of an Agent in an agent cluster from an Agent Cluster Details. Suspending the membership of an Agent in an agent cluster is equivalent to removing the Agent from the agent cluster, except it is meant to be temporary. The Agent will not be available as a selection from the agent cluster when a task is queued against the agent cluster until the membership of the Agent has been resumed.

Note

If a task specifies both an Agent and an agent cluster in which that Agent is a member, and the specified Agent has been suspended from the agent cluster, the Agent still has the ability to run the task. Directly specifying an Agent overrides its suspension from an agent cluster.

To suspend the membership of an Agent from an Agent Cluster Details, click the [Agents in Cluster](#) tab and then either:

- Right-click an **Agent** on the list and, on the [Action menu](#), click **Suspend Cluster Membership**.
- Click the box to the left of an **Agent** and then, from the **Action on selected rows...** drop-down list at the bottom of the page, click **Suspend Cluster Membership**.

Resuming an Agent Cluster Membership

To end the suspension, and resume the membership of an Agent in an agent cluster:

- Click **Resume Cluster Membership** on the [Action menu](#) or from the **Action on selected rows...** drop-down list.

Resetting the Current Task Count

The Current Task Count field in [Agent Details](#) and [Agent Cluster Details](#) identifies the current number of tasks currently being run by, respectively, that Agent or Agent Cluster.

If there is a limit to the number of tasks that an Agent or Agent Cluster can run concurrently (as specified by the **Task Execution Limit** and **Limit Amount** fields), you can reset the current task count to 0. This can help avoid a situation where the Controller believes the Agent to be running more tasks than it actually is running, and therefore might impose the task limit on the Agent unnecessarily.

To reset the Current Task Count field, hover your cursor over the down arrow on the [Agent Details](#) or the [Agent Cluster Details](#) title bar, or right-click the title bar, and then click, respectively, **Reset Agent Task Count** or **Reset Cluster Task Count**.

Note

The following [roles and permissions](#) are required to reset the current task count:

- Reset Agent Task Count requires the **ops_admin** role and the [Update Agent](#) permission.
- Reset Cluster Task Count requires the **ops_agent_cluster_admin** role.

Sending Notifications on Status of an Agent

You can configure an Agent to send a notification via email or SNMP if the Agent goes down (Offline) or then when it comes back up (Active).

| | |
|---------------|---|
| Step 1 | From the Agents & Connections navigation pane, select Agents > All Agents or Agents > <type of agent> . An Agents list displays. |
| Step 2 | Click the icon next to the Agent Name of an Agent, or click anywhere in the Agent row, to display Details about the Agent. |
| Step 3 | Click the Notifications tab to display a list of any Email and SNMP notifications configured for the Agent. |
| Step 4 | Select the type of notification you want the Agent to send, and then click New . Notification Details for a new Notification displays (See Email Notification Details and SNMP Notification Details , below). |
| Step 5 | Complete the fields as needed (see Email Notification Details Field Descriptions and SNMP Notification Details Field Descriptions , below). <div style="background-color: #ffffcc; padding: 10px; margin: 10px 0;"> <p> Note Agent built-in variables are available to pass data about the Agent into the notification. (User-defined variables, including Global variables, are not available for use in Agent email notifications).</p> </div> |
| Step 6 | Click the Save button to save the record. |

Email Notification Details

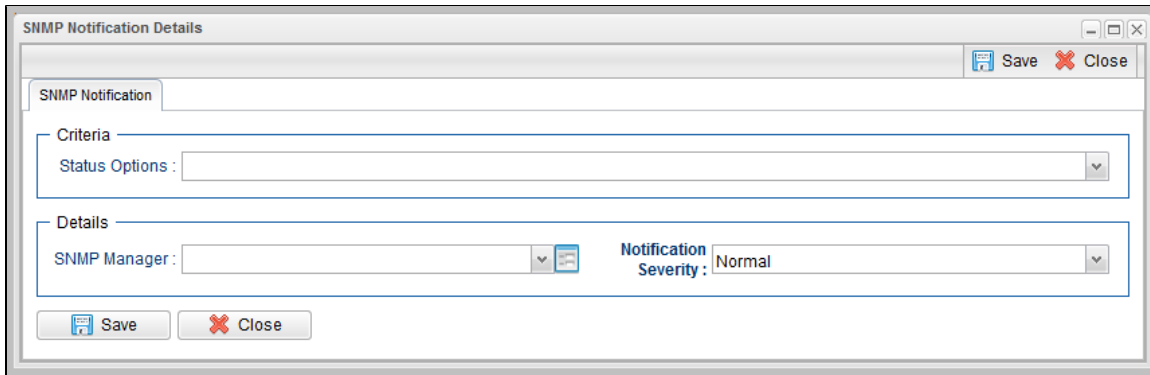

Email Notification Details Field Descriptions

The following table describes the fields and buttons on Email Notification Details.

| Field Name | Description |
|-----------------|---|
| Criteria | This section contains criteria for sending the notification. |
| Status Options | <ul style="list-style-type: none"> Offline = Trigger the notification when the resource goes offline. Active = Trigger the notification when the resource comes up. |

| | |
|-------------------------|---|
| Details | This section contains assorted detailed information about the notification. |
| Email Template | <p>Name of an Email template defined in an Email Template Details. An Email template allows you to specify standard recipients and text for outgoing emails. Enter the name of an existing Email template, select an Email template from the drop-down list, or click the Details icon to create a new Email template.</p> <p>Every Email template specifies an Email connection. If you do not specify an Email template in this field, you must specify an Email connection in the Email Connection field.</p> <p>If you specify both an Email template (in this field) and an Email Connection, the Email server specified in the Email Connection field overrides the Email server specified in this field.</p> <p>(Any information specified in an Email task overrides what is specified in an Email template.)</p> |
| Email Connection | <p>Required if an Email Template is not specified in the Email Template field; name of an Email Connection. An Email Connection specifies information about an email server. Enter the name of an existing Email Connection, or click the magnifying glass to browse for an existing Email Connection or create a new Email Connection.</p> <p>If you specify both an Email Template and an Email Connection (in this field), the Email Connection specified in this field overrides the Email Connection specified in the Email Template field.</p> |
| Reply-To | Email address of the sender. Use commas to separate multiple recipients. Variables and functions supported. |
| To | Email address of the recipient. Use commas to separate multiple recipients. Variables and functions supported. |
| CC | Email address of the party being sent a copy of the email, if any. Use commas to separate multiple recipients. Variables and functions supported. |
| BCC | Email address of the party being sent a blind (hidden) copy of the email, if any. Use commas to separate multiple recipients. Variables and functions supported. |
| Subject | Subject line of the email. Variables and functions supported. |
| Body | Text of the email message. Variables and functions supported. If both the email template and the email task contain text in the body, the text is appended. |
| Buttons | This section identifies the buttons displayed above and below the Notification Details that let you perform various actions. |
| Save button | Submits the new record to the database. |
| Update | Saves updates to the record. |
| Delete | Deletes the current record. |
| Refresh | Refreshes any dynamic data displayed in the Details. |
| Close | For pop-up view only; closes the pop-up view of this notification. |

SNMP Notification Details

SNMP Notification Details Field Descriptions

The following table describes the fields and buttons on SNMP Notification Details.

| Field Name | Description |
|-----------------------|--|
| Criteria | This section contains criteria for sending the notification. |
| Status Options | <ul style="list-style-type: none"> • Offline = Trigger the notification when the resource goes offline. • Active = Trigger the notification when the resource comes up. |
| Details | This section contains assorted detailed information about the notification. |
| SNMP Manager | The SNMP Manager that will receive the SNMP notification. |
| Notification Severity | Severity of this notification. Options: <ul style="list-style-type: none"> • Normal (1) • Warning (2) • Minor (3) • Major (4) • Critical (5) |
| Buttons | This section identifies the buttons displayed above and below the Notification Details that let you perform various actions. |
| Save button | Submits the new record to the database. |
| Update | Saves updates to the record. |
| Delete | Deletes the current record. |
| Refresh | Refreshes any dynamic data displayed in the Details. |
| Close | For pop-up view only; closes the pop-up view of this notification. |

Linux Unix Agent

- [Overview](#)
- [Linux/Unix Agent Details](#)
- [Linux/Unix Agent Details Field Descriptions](#)

Overview

The Linux/Unix Agent resource provides information about Universal Agent for UNIX running on a Linux/Unix platform. To run a Linux/Unix task, you need a UNIX Agent installed and running on the target machine.

Linux/Unix Agent Details

Linux/Unix Agent Details provide the information necessary for the scheduler to locate and communicate with the machine where the Agent resides. Universal Controller creates this record automatically when the Agent connects with the Controller.

To view Linux/Unix Agent Details:

Step 1 From the [Agents & Connections](#) navigation pane, select **Agents > Linux/Unix Agents**. The Linux/Unix Agents list displays a list of connected Linux/Unix Agents.

Note

You also can select **Agents > All Agents** from the **Agents & Connections** navigation pane to display a list of all connected Agents: Linux/Unix, Windows, and z/OS.

Step 2 Click the Details icon next to an Agent Name or click anywhere in the Agent row to display Details for that agent.

Most fields are read-only; however, you can make the following changes:

1. Add a [Member of Business Services](#).
2. Assign [Credentials](#).
3. Change the [heartbeat interval](#). The heartbeat is a status message sent from the Agent to the Controller.
4. Change the [Log Level](#) (default is Informational).
5. Select whether or not to apply a [Task Execution Limit](#) (and [Limit Amount](#)) on the Agent.

You also can choose to temporarily [suspend](#) the agent's ability to run tasks.

See the field descriptions, below, for details about all fields in the Linux/Unix Agent Details.

Linux/Unix Agent Details Field Descriptions

The following table describes the fields, buttons, and tabs in the Linux/Unix Agent Details.

| Field Name | Description |
|------------------------------|---|
| Configuration Details | This section contains detailed information about the configuration of the Agent. |
| Agent Name | User-defined during installation; name used within the Controller to identify this Agent. |
| Agent ID | Unique ID for this Agent, created during installation. |
| Status | System-supplied; status of the Agent. |
| Suspended | Indication that the Agent's ability to run tasks has been suspended. |

| | |
|-----------------------------|--|
| Log Level | <p>User-modifiable; level of logging that the Agent should perform.</p> <p>Options:</p> <ul style="list-style-type: none"> • Severe Error • Errors • Warning • Informational • Debug • Trace |
| Member of Business Service | User-defined at installation; specifies one or more Business Services that this resource belongs to. |
| Heartbeat Interval | <p>User-modifiable; heartbeat interval (in seconds). The heartbeat is a status message sent from the Agent to the Controller.</p> <p>If you change the heartbeat interval, it only affects new Agents that are registered after the change. It does not affect the heartbeat interval of existing Agents.</p> |
| Credentials | Credentials under which this Agent runs tasks. These credentials are overridden by any credentials provided in the task definition for any tasks being run by this Agent. |
| Task Execution Limit | <p>Specification for whether a Limited or Unlimited number of task instances can be run concurrently on the Agent. (Default is Unlimited.)</p> <p>For purposes of imposing this task execution limit, running task instances are those in any of these statuses: Cancel Pending, Queued, Received, Running, Submitted, and Started.</p> |
| Limit Amount | If Task Execution Limit = Limited; Number of tasks that can be running at the same time by the Agent. |
| Installation Details | This section contains detailed information about the installation of the Agent. |
| Host Name | User-provided during installation; IP address or domain/name of the host machine where the resource resides. |
| IP Address | User-provided during installation; TCP/IP address of the machine where the Agent is running. |
| Operating System | System-supplied; operating system on which the Agent is running. |
| Operating System Release | System-supplied; release information for the operating system on which the Agent is running. |
| Version | System-supplied; version number of the Agent program. |
| Build ID | System-supplied, provided by the Agent; build ID of the Agent. Internal use only. |
| Build Date | System-supplied, provided by the Agent; date the Agent program was last built. |
| CPU | System-supplied; information about the CPU on the Agent machine. |

| | |
|-----------------------|--|
| System Details | This section contains detailed information about the Agent system. |
| Started Date | System-supplied; date/timestamp when the Agent was last started. |
| Last Heartbeat | System-supplied; date and time the most recent heartbeat was received from the resource. |
| CPU Load | System-supplied; current CPU load on the Agent machine, expressed as a percentage. For example, 1 means 1% currently utilized. |
| OMS Server | Host name of the OMS Server. |
| PID | System-supplied, provided by the Agent; process ID of the Agent. |
| Jobs Run | Total number of jobs that have been run through the Controller to this Agent. |
| Current Task Count | If Task Execution Limit = Limited; Current number of tasks currently being run by this Agent. (See Resetting the Current Task Count for information on resetting the current task count.) |
| Buttons | This section identifies the buttons displayed above and below the Agent Details that let you perform various actions. |
| Save | Saves a new task record in the Controller database. |
| Update | Saves updates to the record. |
| Suspend Agent | Suspends the Agent's ability to run tasks. |
| Resume Agent | Resumes the suspended Agent's ability to run tasks. |
| Delete | Deletes the current record. |
| Refresh | Refreshes any dynamic data displayed in the Details. |
| Close | For pop-up view only; closes the pop-up view of this task. |
| Tabs | This section identifies the tabs across the top of the Agent Details that provide access to additional information about the Agent. |
| Agent Clusters | Lists all agent clusters that this Agent belongs to. |
| Notifications | Lists all notifications that have been defined for this Agent. |
| Task Instances | System-supplied; lists all task instances that have run or are ready to run on this Agent since it last started. |

Windows Agent

- [Overview](#)
- [Windows Agent Details](#)
- [Windows Agent Details Field Descriptions](#)

Overview

The Windows Agent resource provides information about Universal Agent for Windows running on a Windows platform. To run a Windows task, you need a Windows Agent installed and running on the target machine.

Windows Agent Details

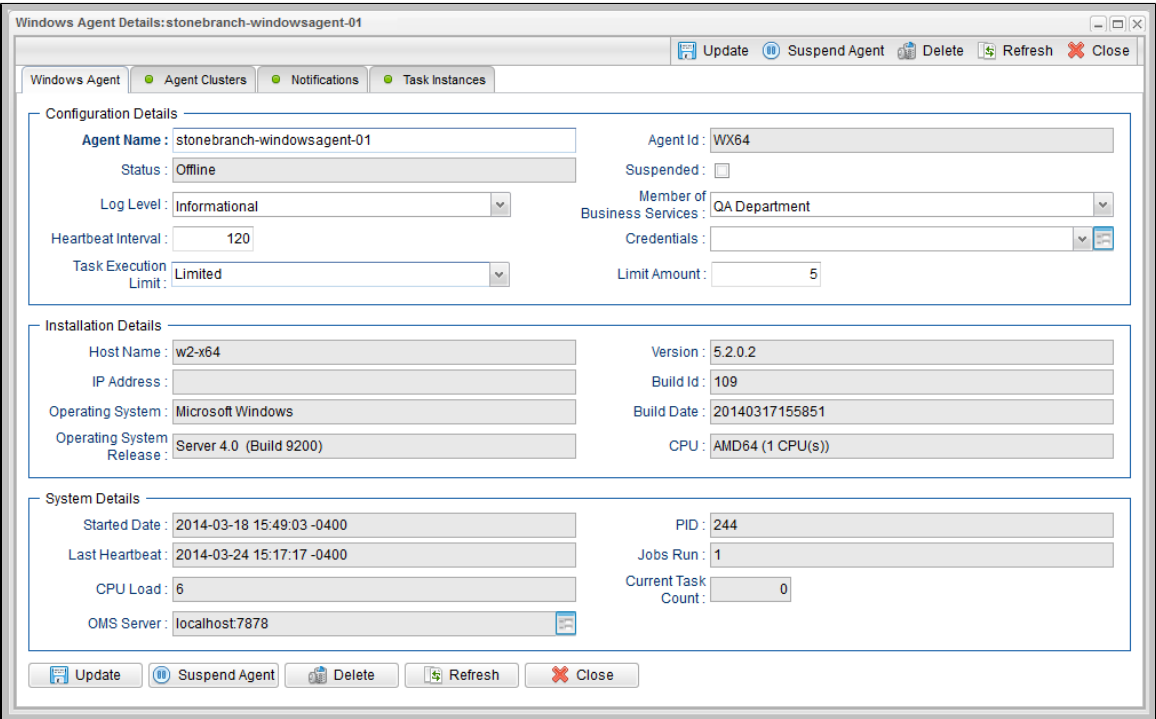

Windows Agent Details provides the information necessary for the scheduler to locate and communicate with the machine where the Agent resides. Universal Controller creates this record automatically when the Agent connects with the Controller.

To view Windows Agent Details:

Step 1 From the [Agents & Connections](#) navigation pane, select **Agents > Windows Agents**. The Windows Agents list displays a list of connected Windows Agents.

Note
 You also can select **Agents > All Agents** from the **Agents & Connections** navigation pane to display a list of all Agents: Linux/Unix, Windows, and z/OS.

Step 2 Click the Details icon next to an Agent Name or click anywhere in the Agent row to display Details for that agent.

The screenshot shows the 'Windows Agent Details: stonebranch-windowsagent-01' window. It features a top toolbar with 'Update', 'Suspend Agent', 'Delete', 'Refresh', and 'Close' buttons. Below the toolbar are tabs for 'Windows Agent', 'Agent Clusters', 'Notifications', and 'Task Instances'. The main content is divided into three sections: Configuration Details, Installation Details, and System Details. Configuration Details includes fields for Agent Name (stonebranch-windowsagent-01), Agent Id (WX64), Status (Offline), Log Level (Informational), Heartbeat Interval (120), Task Execution Limit (Limited), Suspended (checkbox), Member of Business Services (QA Department), Credentials, and Limit Amount (5). Installation Details includes Host Name (w2-x64), IP Address, Operating System (Microsoft Windows Server 4.0 (Build 9200)), Version (5.2.0.2), Build Id (109), Build Date (20140317155851), and CPU (AMD64 (1 CPU(s))). System Details includes Started Date (2014-03-18 15:49:03 -0400), Last Heartbeat (2014-03-24 15:17:17 -0400), CPU Load (6), OMS Server (localhost:7878), PID (244), Jobs Run (1), and Current Task Count (0). A bottom toolbar contains 'Update', 'Suspend Agent', 'Delete', 'Refresh', and 'Close' buttons.

| | |
|---------------|--|
| Step 3 | <p>Most fields are display-only; however, you can make the following changes:</p> <ol style="list-style-type: none"> 1. Add a Member of Business Services. 2. Assign Credentials. 3. Change the heartbeat interval. The heartbeat is a status message sent from the Agent to the Controller. 4. Change the Log Level (default is Informational). 5. Select whether or not to apply a Task Execution Limit (and Limit Amount) on the Agent. <p>You also can choose to temporarily suspend the agent's ability to run tasks.</p> <p>See the field descriptions, below, for details about all fields in the Windows Details.</p> |
|---------------|--|

Windows Agent Details Field Descriptions

The following table describes the fields, buttons, and tabs in the Windows Agent Details.

| Field Name | Description |
|------------------------------|---|
| Configuration Details | This section contains detailed information about the configuration of the Agent. |
| Agent Name | User-defined during installation; name used within the Controller to identify this Agent. |
| Agent ID | Unique ID for this Agent, created during installation. |
| Status | System-supplied; status of the Agent. |
| Suspended | Indication that the Agent's ability to run tasks has been suspended. |
| Log Level | <p>User-modifiable; level of logging that the Agent should perform.</p> <p>Options:</p> <ul style="list-style-type: none"> • Severe Error • Errors • Warning • Informational • Debug • Trace |
| Member of Business Service | User-defined at installation; specifies one or more Business Services that this resource belongs to. |
| Heartbeat Interval | <p>User-modifiable; heartbeat interval (in seconds). The heartbeat is a status message sent from the Agent to the Controller.</p> <p>If you change the heartbeat interval, it only affects new Agents that are registered after the change. It does not affect the heartbeat interval of existing Agents.</p> |
| Credentials | Credentials under which this Agent runs tasks. These credentials are overridden by any credentials provided in the task definition for any tasks being run by this Agent. |

| | |
|-----------------------------|--|
| Task Execution Limit | <p>Specification for whether a Limited or Unlimited number of task instances can be run concurrently on the Agent. (Default is Unlimited.)</p> <p>For purposes of imposing this task execution limit, running task instances are those in any of these statuses: Cancel Pending, Queued, Received, Running, Submitted, and Started.</p> |
| Limit Amount | If Task Execution Limit = Limited; Number of tasks that can be running at the same time by the Agent. |
| Installation Details | This section contains detailed information about the installation of the Agent. |
| Host Name | User-provided during installation; IP address or domain/name of the host machine where the resource resides. |
| IP Address | User-provided during installation; TCP/IP address of the machine where the Agent is running. |
| Operating System | System-supplied; operating system on which the Agent is running. |
| Operating System Release | System-supplied; release information for the operating system on which the Agent is running. |
| Version | System-supplied; version number of the Agent program. |
| Build ID | System-supplied, provided by the Agent; build ID of the Agent. Internal use only. |
| Build Date | System-supplied, provided by the Agent; date the Agent program was last built. |
| CPU | System-supplied; information about the CPU on the Agent machine. |
| System Details | This section contains detailed information about the Agent system. |
| Started Date | System-supplied; date/timestamp when the Agent was last started. |
| Last Heartbeat | System-supplied; date and time the most recent heartbeat was received from the resource. |
| CPU Load | System-supplied; current CPU load on the Agent machine, expressed as a percentage. For example, 1 means 1% currently utilized. |
| OMS Server | Host name of the OMS Server. |
| PID | System-supplied, provided by the Agent; process ID of the Agent. |
| Jobs Run | Total number of jobs that have been run through the Controller to this Agent. |
| Current Task Count | <p>If Task Execution Limit = Limited; Current number of tasks currently being run by this Agent.</p> <p>(See Resetting the Current Task Count for information on resetting the current task count.)</p> |

| | |
|-----------------------|---|
| Buttons | This section identifies the buttons displayed above and below the Agent Details that let you perform various actions. |
| Save | Saves a new task record in the Controller database. |
| Update | Saves updates to the record. |
| Suspend Agent | Suspends the Agent's ability to run tasks. |
| Resume Agent | Resumes the suspended Agent's ability to run tasks. |
| Delete | Deletes the current record. |
| Refresh | Refreshes any dynamic data displayed in the Details. |
| Close | For pop-up view only; closes the pop-up view of this task. |
| Tabs | This section identifies the tabs across the top of the Agent Details that provide access to additional information about the Agent. |
| Agent Clusters | Lists all agent clusters that this Agent belongs to. |
| Notifications | Lists all notifications that have been defined for this Agent. |
| Task Instances | System-supplied; lists all task instances that have run or are ready to run on this Agent since it last started. |

z/OS Agent

- [Overview](#)
- [z/OS Agent Details](#)
- [z/OS Agent Details Field Descriptions](#)

Overview

The z/OS Agent resource provides information about a Universal Agent for z/OS running on a z/OS platform.

To run a z/OS task, you need a z/OS Agent installed and running on the target machine.

z/OS Agent Details

z/OS Agent Details provide the information necessary for the scheduler to locate and communicate with the machine where the Agent resides. Universal Controller creates this record automatically when the Agent connects with the Controller.

To view z/OS Agent Details:

Step 1 From the [Agents & Connections](#) navigation pane, select **Agents > z/OS Agents**. The z/OS Agents list displays a list of connected z/OS Agents.

**Note**

You also can select **Agents > All Agents** from the **Agents & Connections** navigation pane to display a list of all connected Agents: Linux/Unix, Windows, and z/OS.

Step 2 Click the Details icon next to an Agent Name or click anywhere in the Agent row to display Details for that agent.

Most fields are read-only; however, you can make the following changes:

1. Add a [Member of Business Services](#).
2. Assign [Credentials](#).
3. Change the [heartbeat interval](#). The heartbeat is a status message sent from the Agent to the Controller.
4. Change the [Log Level](#) (default is Informational).
5. Select whether or not to apply a [Task Execution Limit](#) (and [Limit Amount](#)) on the Agent.

You also can choose to temporarily [suspend](#) the agent's ability to run tasks.

See the field descriptions, below, for details about all fields in the z/OS Agent Details.

z/OS Agent Details Field Descriptions

The following table describes the fields, buttons, and tabs in the z/OS Agent Details.

| Field Name | Description |
|------------------------------|---|
| Configuration Details | This section contains detailed information about the configuration of the Agent. |
| Agent Name | User-defined during installation; name used within the Controller to identify this Agent. |
| Agent ID | Unique ID for this Agent, created during installation. |
| Status | System-supplied; status of the Agent. |
| Suspended | Indication that the Agent's ability to run tasks has been suspended. |

| | |
|-----------------------------|--|
| Log Level | <p>User-modifiable; level of logging that the Agent should perform.</p> <p>Options:</p> <ul style="list-style-type: none"> • Severe Error • Errors • Warning • Informational • Debug • Trace |
| Member of Business Service | User-defined at installation; specifies one or more Business Services that this resource belongs to. |
| Heartbeat Interval | <p>User-modifiable; heartbeat interval (in seconds). The heartbeat is a status message sent from the Agent to the Controller.</p> <p>If you change the heartbeat interval, it only affects new Agents that are registered after the change. It does not affect the heartbeat interval of existing Agents.</p> |
| Credentials | Credentials under which this Agent runs tasks. These credentials are overridden by any credentials provided in the task definition for any tasks being run by this Agent. |
| Task Execution Limit | <p>Specification for whether a Limited or Unlimited number of task instances can be run concurrently on the Agent. (Default is Unlimited.)</p> <p>For purposes of imposing this task execution limit, running task instances are those in any of these statuses: Cancel Pending, Queued, Received, Running, Submitted, and Started.</p> |
| Limit Amount | If Task Execution Limit = Limited; Number of tasks that can be running at the same time by the Agent. |
| Installation Details | This section contains detailed information about the installation of the Agent. |
| Host Name | User-provided during installation; IP address or domain/name of the host machine where the resource resides. |
| IP Address | User-provided during installation; TCP/IP address of the machine where the Agent is running. |
| Operating System | System-supplied; operating system on which the Agent is running. |
| Operating System Release | System-supplied; release information for the operating system on which the Agent is running. |
| Version | System-supplied; version number of the Agent program. |
| Build ID | System-supplied, provided by the Agent; build ID of the Agent. Internal use only. |
| Build Date | System-supplied, provided by the Agent; date the Agent program was last built. |
| CPU | System-supplied; information about the CPU on the Agent machine. |

| | |
|-----------------------|--|
| System Details | This section contains detailed information about the Agent system. |
| Started Date | System-supplied; date/timestamp when the Agent was last started. |
| Last Heartbeat | System-supplied; date and time the most recent heartbeat was received from the resource. |
| CPU Load | System-supplied; current CPU load on the Agent machine, expressed as a percentage. For example, 1 means 1% currently utilized. |
| OMS Server | Host name of the OMS Server. |
| PID | System-supplied, provided by the Agent; process ID of the Agent. |
| Jobs Run | Total number of jobs that have been run through the Controller to this Agent. |
| Current Task Count | If Task Execution Limit = Limited; Current number of tasks currently being run by this Agent. (See Resetting the Current Task Count for information on resetting the current task count.) |
| Buttons | This section identifies the buttons displayed above and below the Agent Details that let you perform various actions. |
| Save | Saves a new task record in the Controller database. |
| Update | Saves updates to the record. |
| Suspend Agent | Suspends the Agent's ability to run tasks. |
| Resume Agent | Resumes the suspended Agent's ability to run tasks. |
| Delete | Deletes the current record. |
| Refresh | Refreshes any dynamic data displayed in the Details. |
| Close | For pop-up view only; closes the pop-up view of this task. |
| Tabs | This section identifies the tabs across the top of the Agent Details that provide access to additional information about the Agent. |
| Agent Clusters | Lists all agent clusters that this Agent belongs to. |
| Notifications | Lists all notifications that have been defined for this Agent. |
| Task Instances | System-supplied; lists all task instances that have run or are ready to run on this Agent since it last started. |

Agent Clusters

- Overview
- Creating an Agent Cluster
 - Agent Cluster Details
 - Agent Cluster Details Field Descriptions
- Assigning Agents to the Cluster
- Suspending Agent Clusters and Agent Cluster Memberships

Overview

For Windows and Linux/Unix Agents only, Universal Controller allows you to create clusters (groups) of Agents.

If you specify an agent cluster in a task, the Controller selects an Agent from the cluster based on the selection method that you specified when you created the cluster. If you specify both an Agent and an agent cluster in a task, the Controller first attempts to run the task on the Agent; if the Agent is unavailable, the Controller selects an Agent from the agent cluster.

**Note**

The instructions and illustrations, below, for creating Windows agent clusters and Linux/Unix agent clusters, and assigning Agents to those clusters, are the same.

Creating an Agent Cluster

Step 1 From the **Agents & Connections** navigation pane, select (for example) **Agent Clusters > Linux/Unix Agent Clusters**. The Linux/Unix Clusters List displays.

Below the list, Agent Cluster Details for a new Agent Cluster displays. (You also can click the **New** button to display Agent Cluster Details for a new Agent Cluster.)

The screenshot shows the 'Linux/Unix Agent Clusters' interface. At the top, there is a list of 5 clusters with columns for Cluster Name, Distribution, Current Task Count, Suspended, Updated By, and Updated. Below the list, the 'Linux/Unix Agent Cluster Details' section is visible, containing fields for Cluster Name, Distribution, Suspended, Task Execution Limit, Version, Last Agent Used, Current Task Count, and Limit Amount. There are 'Save' and 'New' buttons at the bottom of the details section.

| Cluster Name | Distribution | Current Task Count | Suspended | Updated By | Updated |
|---------------------------------|--------------|--------------------|-----------|------------|---------------------------|
| stonebranch-linuxunixcluster-01 | Any | 0 | No | ops.admin | 2014-06-13 15:23:02 -0400 |
| stonebranch-linuxunixcluster-02 | Any | 0 | No | ops.admin | 2014-06-13 15:23:06 -0400 |
| stonebranch-linuxunixcluster-03 | Any | 0 | No | ops.admin | 2014-06-13 15:23:11 -0400 |
| stonebranch-linuxunixcluster-04 | Any | 0 | No | ops.admin | 2014-06-13 15:23:16 -0400 |
| stonebranch-linuxunixcluster-05 | Any | 0 | No | ops.admin | 2014-06-13 15:23:19 -0400 |

Linux/Unix Agent Cluster Details

Linux/Unix Agent Cluster

Agents In Cluster | Tasks | Versions

Details

Cluster Name:

Distribution:

Suspended:

Task Execution Limit:

Version:

Last Agent Used:

Current Task Count:

Limit Amount:

Save | New

Step 2 Enter / select Details for a new agent cluster, using the **field descriptions** below as a guide.

- Required fields display in **boldface**.
- Default values for fields, if available, display automatically.

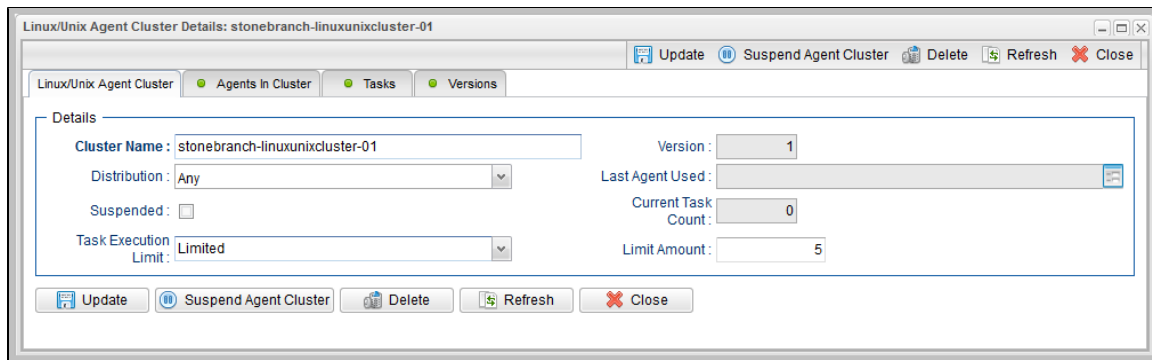

To display more of the Details fields on the screen, you can temporarily **hide the list**.

Note
If you view **Agent Cluster Details** for an existing agent cluster by clicking a n agent cluster in the list, and then want to create a new agent cluster, you must click the **New** button that displays above and below the Details.

Step 3 Click the **Save** button. The task is added to the database, and all buttons and tabs in the Agent Cluster Details are enabled.

Agent Cluster Details

The following Agent Cluster Details is for an existing Linux/Unix agent cluster. See the **field descriptions**, below, for a description of all fields that may display in the Agent Cluster Details.

Agent Cluster Details Field Descriptions

The following table describes the fields, buttons, and tabs in the Agent Cluster Details.

| Field Name | Description |
|----------------------|---|
| Details | This section contains detailed information about the agent cluster. |
| Cluster Name | Name used within the Controller to identify this agent cluster. Up to 40 alphanumeric. It is the responsibility of the user to develop a workable naming scheme for agent clusters. |
| Version | System-supplied; version number of the current record, which is incremented by the Controller every time a user updates a record. Click the Versions tab to view previous versions. For details, see Record Versioning . |
| Distribution. | Method used to select an Agent. Options: <ul style="list-style-type: none"> • Any - Select any Agent in the cluster. • Round Robin - Select the next Agent in a round robin series. • Lowest CPU Utilization - Selects the Agent whose CPU utilization is currently the lowest. |
| Last Agent Used | System-supplied; Agent that was selected the last time a task was sent to this agent cluster. |
| Suspended | Indication that the ability for this cluster of Agents to run tasks has been suspended. |
| Current Task Count | If Task Execution Limit = Limited; Current number of tasks currently being run by the Agents in this agent cluster. (See Resetting the Current Task Count for information on resetting the current task count.) |
| Task Execution Limit | Specification for whether a Limited or Unlimited number of task instances can be run concurrently by the Agents in this agent cluster. (Default is Unlimited .) For purposes of imposing this task execution limit, running task instances are those in any of these statuses: Cancel Pending, Queued, Received, Running, Submitted, and Started. |
| Limit Amount | If Task Execution Limit = Limited; Number of tasks that can be running at the same time by the Agents in this agent cluster. |
| Buttons | This section identifies the buttons displayed above and below the Agent Cluster Details that let you perform various actions. |
| Save | Saves a new task record in the Controller database. |
| Update | Saves updates to the record. |

| | |
|------------------------------|---|
| Suspend Agent Cluster | Suspends the ability for this cluster of Agents to run tasks. |
| Resume Agent Cluster | Resumes the ability for this suspended cluster of Agents to run tasks. |
| Delete | Deletes the current record. |
| Refresh | Refreshes any dynamic data displayed in the Details. |
| Close | For pop-up view only; closes the pop-up view of this task. |
| Tabs | This section identifies the tabs across the top of the Agent Cluster Details that provide access to additional information about the agent cluster. |
| Agents in Cluster | List of Agents assigned to this cluster. |
| Tasks | Lists all tasks, according to task type, that currently are being dispatched to this agent cluster. You also can create tasks for the identified task types that will have this agent cluster pre-selected in the Agent Cluster field of its Task Details. |
| Versions | Stores copies of all previous versions of the current record. See Record Versioning . |

Assigning Agents to the Cluster

| | |
|---------------|---|
| Step 1 | On the Linux/Unix Clusters list (for example), click the Cluster Name of the cluster to which you want to assign one or more existing Agents. |
|---------------|---|

Step 2 Click the **Agents in Cluster** tab to display a list of Agents currently assigned to the cluster.

The screenshot displays the 'Linux/Unix Agent Clusters' management interface. At the top, there is a table listing 5 clusters. Below the table, the 'Linux/Unix Agent Cluster Details' section is visible, with the 'Agents in Cluster' tab selected. The 'Details' form contains the following fields:

| Cluster Name | Distribution | Current Task Count | Suspended | Updated By | Updated |
|---------------------------------|--------------|--------------------|-----------|------------|---------------------------|
| stonebranch-linuxunixcluster-01 | Any | 0 | No | ops.admin | 2014-06-13 15:23:02 -0400 |
| stonebranch-linuxunixcluster-02 | Any | 0 | No | ops.admin | 2014-06-13 15:23:06 -0400 |
| stonebranch-linuxunixcluster-03 | Any | 0 | No | ops.admin | 2014-06-13 15:23:11 -0400 |
| stonebranch-linuxunixcluster-04 | Any | 0 | No | ops.admin | 2014-06-13 15:23:16 -0400 |
| stonebranch-linuxunixcluster-05 | Any | 0 | No | ops.admin | 2014-06-13 15:23:19 -0400 |

The 'Details' form includes the following fields:

- Cluster Name: [Text Input]
- Distribution: Any (Dropdown)
- Suspended:
- Task Execution Limit: Limited (Dropdown)
- Version: 1 (Text Input)
- Last Agent Used: [Text Input]
- Current Task Count: 0 (Text Input)
- Limit Amount: 5 (Text Input)

Buttons for 'Save' and 'New' are located at the bottom of the details form.

Step 3 Click the **Edit** button. The Edit Members dialog displays:

The 'Edit Members' dialog box is shown with two lists and navigation controls:

- Collection:**
 - Agent Name
 - stonebranch-linuxunixagent-04
 - stonebranch-linuxunixagent-05
- Linux/Unix Agents List:**
 - Agent Name
 - stonebranch-linuxunixagent-01
 - stonebranch-linuxunixagent-02
 - stonebranch-linuxunixagent-03

Navigation buttons between the lists include: →, ←, ⇨, ⇩.

Buttons for 'Save' and 'Cancel' are located at the bottom of the dialog.

| | |
|---------------|--|
| Step 4 | The Agents in the Collection window are existing Agents of the current type that do not belong to this cluster. The Agents in the Linux/Unix Agents List window are Agents that belong to this cluster. |
| Step 5 | To add to or remove Agents from the Linux/Unix Agents List: <ul style="list-style-type: none">• To add an Agent, double-click the Agent Name (or click the Agent Name and then click the -> arrow) in the Collection window.• To remove an Agent from the list, double-click the Agent Name (or click the Agent Name and then click the <- arrow) in the Linux/Unix Agents List window. |
| Step 6 | When you are finished, click Save . |

Suspending Agent Clusters and Agent Cluster Memberships

You can temporarily suspend the ability for an agent cluster to run tasks, and you can temporarily suspend the agent cluster membership of any Agent in an agent cluster.

For information on how to implement these suspensions, see [Suspending Agents, Agent Clusters, and Agent Cluster Memberships](#).

OMS Servers

- Introduction
- Creating OMS Server Records
 - OMS Server Details
 - OMS Server Details Field Descriptions
- Starting and Stopping OMS
- Sending Notifications on Status of an OMS Server
 - Email Notification Details
 - Email Notification Details Field Descriptions
 - SNMP Notification Details
 - SNMP Notification Details Field Descriptions

Introduction

OMS (Universal Message Service) Servers are the network communication providers between Universal Controller 6.3.x and Universal Agent 6.3.x.

Creating OMS Server Records

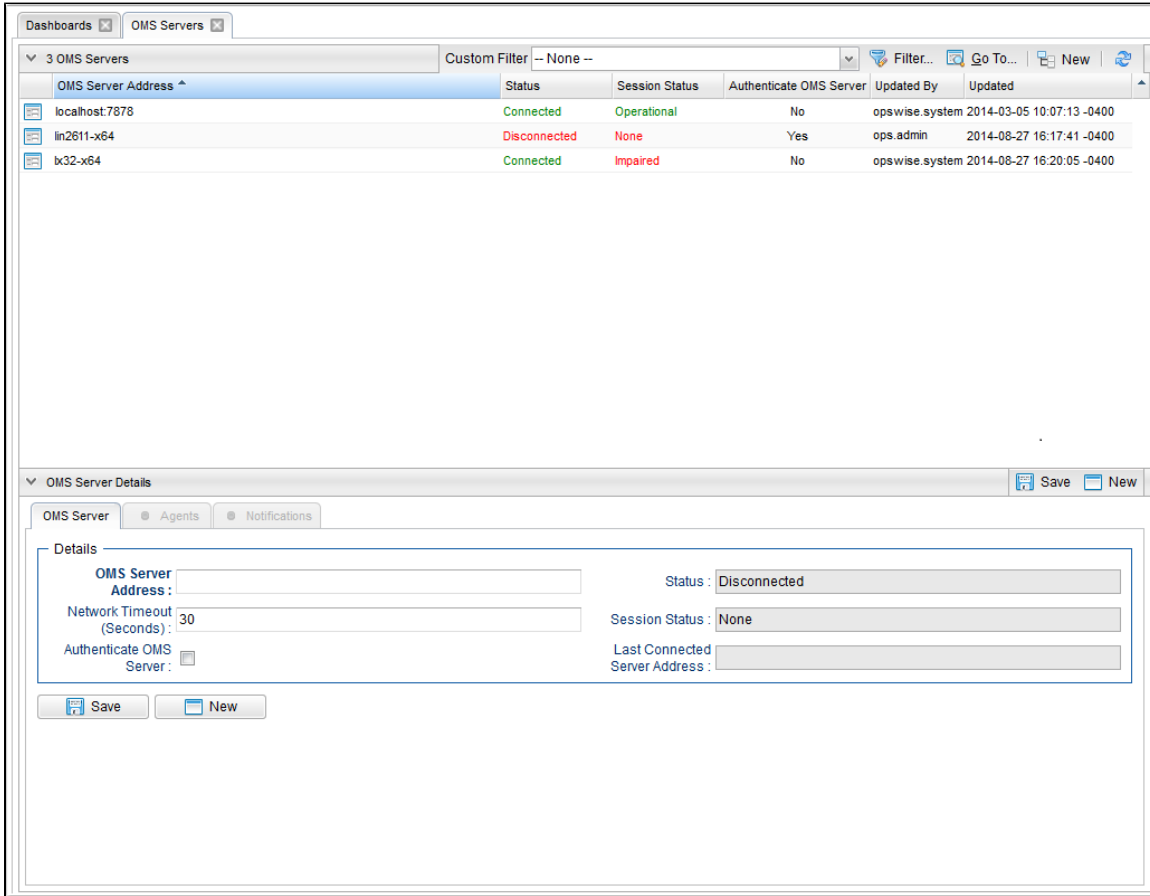

You must create a record for each OMS Server and OMS HA cluster (two or more OMS Servers in an [HA / High Availability](#) environment) that will be used as the network communications provider between the Controller and Agents.

Do not create individual records for each member (OMS Server) of an OMS HA cluster. You must define an OMS HA cluster as a single record, with the [OMS Server Address](#) containing a comma-separated list of each OMS Server in the cluster.

Step 1 From the **Agents & Connections** navigation pane, select **System > OMS Servers**. The OMS Servers list displays.

Below the list, OMS Server Details for a new OMS Server record displays. (You also can click the **New** button to display OMS Server Details for a new OMS Server record.)

Step 2 Enter / select Details for a new OMS Server, using the [field descriptions](#) below as a guide.

- Required fields display in **boldface**.
- Default values for fields, if available, display automatically.

To display more of the Details fields on the screen, you can temporarily [hide the list](#).

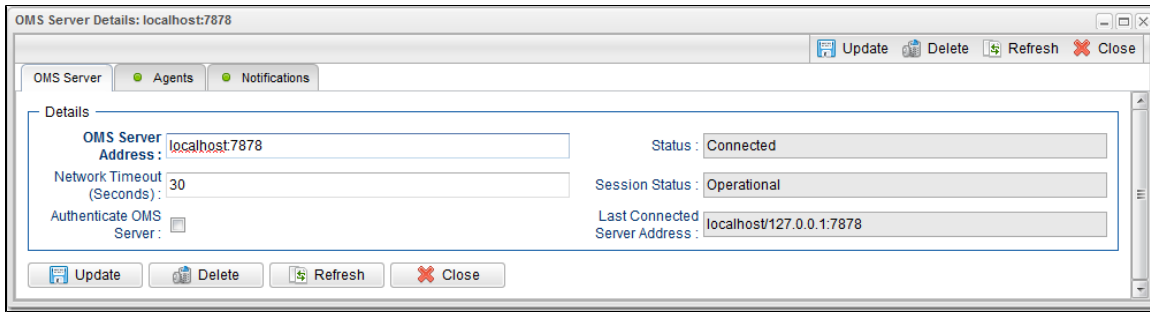

Note

If you view [OMS Server Details](#) for an existing OMS Server by clicking an OMS Server in the list, and then want to create a new OMS Server record, you must click the **New** button that displays above and below the Details.

Step 3 Click the **Save** button. The OMS Server record is added to the database, and all buttons and tabs in the OMS Server Details are enabled.

OMS Server Details

The following OMS Server Details is for an existing OMS Server. See the [field descriptions](#), below, for a description of all fields that display in the OMS Server Details.

OMS Server Details Field Descriptions

The following table describes the fields, buttons, and tabs that display in the OMS Server Details.

| Field Name | Description |
|-------------------------------|--|
| Details | This section contains detailed information about the OMS Server. |
| OMS Server Address | IP address or host name of an OMS Server, or a comma-separated list of OMS Servers configured as an OMS Server cluster. |
| Network Timeout (Seconds) | Network socket time-out value used for TCP/IP receive and connect operations. |
| Authenticate OMS Server | If enabled, the Controller authenticates the OMS server digital certificate. |
| Status | Current status of the OMS server: Connected or Disconnected. |
| Session Status | Current status of the OMS server messaging sessions: heartbeat, input, and output sessions. Options: <ul style="list-style-type: none"> • Operational - All OMS Server messaging sessions are operational. • Impaired - Ability of OMS clients to produce and/or consume messages is impaired. • None - OMS Server is disconnected. |
| Last Connected Server Address | OMS Server, in a High Availability environment of multiple cluster nodes, that is connected to the Controller or was last connected to the Controller. |
| Buttons | This section identifies the buttons displayed above and below the OMS Server Details that let you perform various actions. |
| Save | Saves a new record in the Controller database. |
| Update | Saves updates to the record. |
| New | Displays empty (except for default values) Details for creating a new OMS Server record. |
| Delete | Deletes the current record. |
| Refresh | Refreshes any dynamic data displayed in the Details. |
| Close | For pop-up view only; closes the pop-up view of this record. |
| Tabs | This section identifies the tabs across the top of the OMS Server Details that provide access to additional information about the OMS Server. |
| Agents | Lists all Agents for which this OMS Server is the network communication provider between the Controller. |
| Notifications | Lists all notifications that have been defined for this OMS Server. |

Starting and Stopping OMS

For instructions on starting and stopping OMS Servers, see [Starting and Stopping Agent Components](#).

Sending Notifications on Status of an OMS Server

You can configure OMS Servers to send a notification via email or SNMP if that OMS Server status changes from Connected to Disconnected or Disconnected to Connected.

| | |
|---------------|---|
| Step 1 | From the Agents and Connections navigation pane, select System > OMS Servers . The OMS Servers list displays. |
| Step 2 | Open the record of an OMS Server on the list. |
| Step 3 | Click the Notifications tab to display a list of any Email and SNMP notifications configured for the OMS Server. |
| Step 4 | Select the type of notification you want the OMS Server to send, and then click New . Notification Details for a new Notification displays (See Email Notification Details and SNMP Notification Details , below). |
| Step 5 | Complete the fields as needed (see Email Notification Details Field Descriptions and SNMP Notification Details Field Descriptions , below). <div style="background-color: #ffffcc; padding: 10px; margin: 10px 0;"> <p> Note OMS built-in variables are available to pass data about the OMS Server into the notification. (User-defined variables, including Global variables, are not available for use in OMS Server email notifications.)</p> </div> |
| Step 6 | Click the Save button to save the record. |

Email Notification Details

Email Notification Details Field Descriptions

The following table describes the fields and buttons on Email Notification Details.

| Field Name | Description |
|------------|-------------|
|------------|-------------|

| | |
|--------------------|---|
| Criteria | This section contains criteria for sending the notification. |
| Status Options | <ul style="list-style-type: none"> • Disconnected = Trigger the notification when the OMS Server is connected. • Connected = Trigger the notification when the OMS Server is connected. <div style="background-color: #ffffcc; padding: 10px; margin-top: 10px;"> <p> Note</p> <ul style="list-style-type: none"> • If you select Disconnected, and the OMS Server status is Connected but the session status becomes Impaired, the notification will qualify and be sent. • If you select Connected, and the OMS Server recovers from an Impaired session status, the notification will qualify and be sent. </div> |
| Details | This section contains assorted detailed information about the notification. |
| Email Template | <p>Name of an Email template defined in an Email Template Details. An Email template allows you to specify standard recipients and text for outgoing emails. Enter the name of an existing Email template, select an Email template from the drop-down list, or click the Details icon to create a new Email template.</p> <p>Every Email template specifies an Email connection. If you do not specify an Email template in this field, you must specify an Email connection in the Email Connection field.</p> <p>If you specify both an Email template (in this field) and an Email Connection, the Email server specified in the Email Connection field overrides the Email server specified in this field.</p> <p>(Any information specified in an Email task overrides what is specified in an Email template.)</p> |
| Email Connection | <p>Required if an Email Template is not specified in the Email Template field; name of an Email Connection. An Email Connection specifies information about an email server. Enter the name of an existing Email Connection, or click the magnifying glass to browse for an existing Email Connection or create a new Email Connection.</p> <p>If you specify both an Email Template and an Email Connection (in this field), the Email Connection specified in this field overrides the Email Connection specified in the Email Template field.</p> |
| Reply-To | Email address of the sender. Use commas to separate multiple recipients. Variables and functions supported. |
| To | Email address of the recipient. Use commas to separate multiple recipients. Variables and functions supported. |
| CC | Email address of the party being sent a copy of the email, if any. Use commas to separate multiple recipients. Variables and functions supported. |
| BCC | Email address of the party being sent a blind (hidden) copy of the email, if any. Use commas to separate multiple recipients. Variables and functions supported. |
| Subject | Subject line of the email. Variables and functions supported. |
| Body | Text of the email message. Variables and functions supported. If both the email template and the email task contain text in the body, the text is appended. |
| Buttons | This section identifies the buttons displayed above and below the Notification Details that let you perform various actions. |
| Save button | Submits the new record to the database. |

| | |
|----------------|--|
| Update | Saves updates to the record. |
| Delete | Deletes the current record. |
| Refresh | Refreshes any dynamic data displayed in the Details. |
| Close | For pop-up view only; closes the pop-up view of this notification. |

SNMP Notification Details

SNMP Notification Details Field Descriptions

The following table describes the fields and buttons on SNMP Notification Details.

| Field Name | Description |
|-----------------|--|
| Criteria | This section contains criteria for sending the notification. |
| Status Options | <ul style="list-style-type: none"> • Disconnected = Trigger the notification when the OMS Server is connected. • Connected = Trigger the notification when the OMS Server is connected. <div style="background-color: #ffffcc; padding: 10px; margin-top: 10px;"> <p> Note</p> <ul style="list-style-type: none"> • If you select Disconnected, and the OMS Server status is Connected but the session status becomes Impaired, the notification will qualify and be sent. • If you select Connected, and the OMS Server recovers from an Impaired session status, the notification will qualify and be sent. </div> |
| Details | This section contains assorted detailed information about the notification. |
| SNMP Manager | The SNMP Manager that will receive the SNMP notification. |

| | |
|------------------------------|---|
| <p>Notification Severity</p> | <p>Severity of this notification.</p> <p>Options:</p> <ul style="list-style-type: none"> • Normal (1) • Warning (2) • Minor (3) • Major (4) • Critical (5) |
| <p>Buttons</p> | <p>This section identifies the buttons displayed above and below the Notification Details that let you perform various actions.</p> |
| <p>Save button</p> | <p>Submits the new record to the database.</p> |
| <p>Update</p> | <p>Saves updates to the record.</p> |
| <p>Delete</p> | <p>Deletes the current record.</p> |
| <p>Refresh</p> | <p>Refreshes any dynamic data displayed in the Details.</p> |
| <p>Close</p> | <p>For pop-up view only; closes the pop-up view of this notification.</p> |

Cluster Nodes

- Introduction
- Displaying Information About Cluster Nodes
 - Cluster Node Details
 - Cluster Node Details Field Descriptions
- Starting/Stopping Cluster Nodes
- Sending Notifications on Status of a Cluster Node
 - Email Notification Details
 - Email Notification Details Field Descriptions
 - SNMP Notification Details
 - SNMP Notification Details Field Descriptions

Introduction

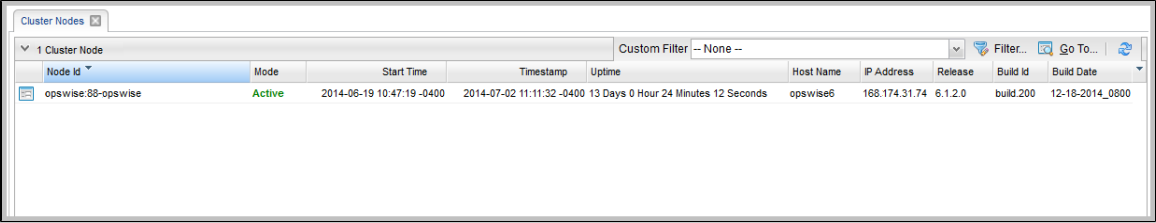

Cluster Nodes are Universal Controller instances in a Universal Automation Center system.

Universal Automation Center contains more than one cluster node only if it is operating in a [High Availability](#) environment.

Displaying Information About Cluster Nodes

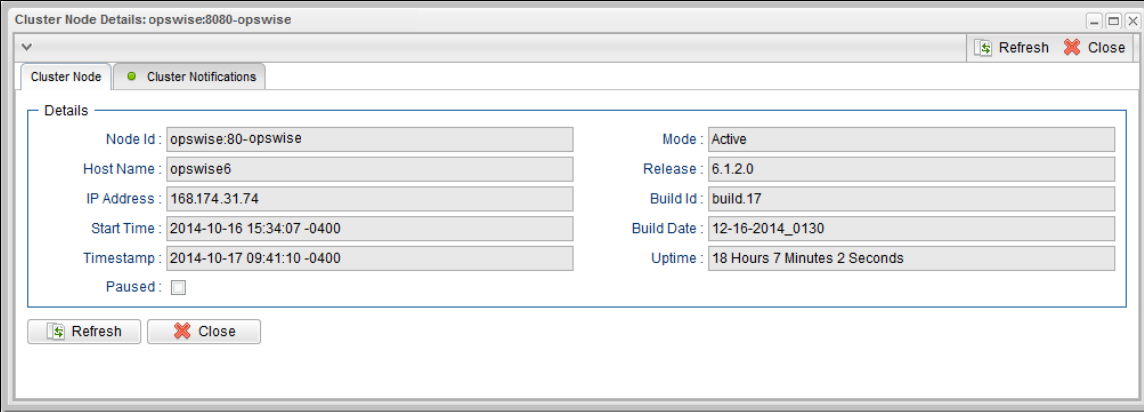

When you start a cluster node for the first time, the Controller automatically creates a database record for that cluster node. You can view these records for details and status information.

Step 1 From the [Agents & Connections](#) navigation pane, select **System > Cluster Nodes**. The Cluster Nodes list displays:

Step 2 To display the Details for a cluster node on the list, click the Details icon next to the **Node Id** of the OMS Server, or click anywhere in the OMS Server row.

Cluster Node Details

Cluster Node Details Field Descriptions

The following table describes the fields on the Cluster Nodes Details

| Field Name | Description |
|------------------------------|---|
| Details | This section contains detailed information about the cluster node. |
| Node ID | URL of the cluster node. |
| Mode | Current mode of the cluster node: <ul style="list-style-type: none"> • Active: Cluster node processes events and messages and interfaces with the database. It is the active node for automated operations. • Passive: Cluster node is running but is not connected to its OMS Server. It performs the following tasks: <ul style="list-style-type: none"> • Accepts HTTP requests for data. It can access the database, generate reports, monitor and display data. • Does not process any events or messages. • Takes over as Active node if it determines that the Active node is not running. • Offline: Cluster node is not running. (See Passive Cluster Node Restrictions for further information on Passive cluster node capabilities.) |
| Host Name | User-provided during installation; IP address or domain/name of the host machine where the resource resides. |
| Release | System-supplied; release number for this node. Support purposes only. |
| IP Address | System-supplied; IP address of this node. |
| Build ID | System-supplied; build ID for this node. Support purposes only. |
| Start Time | System-supplied; date and time this node was last started. |
| Build Date | System-supplied; build date for this node. Support purposes only. |
| Timestamp | System-supplied; date and time of this node's last heartbeat. |
| Uptime | System-supplied; amount of time this node has been running. |
| Paused | Indication that the Controller has been paused . |
| Buttons | This section identifies the buttons displayed above and below the Cluster Node Details that let you perform various actions. |
| Refresh | Refreshes any dynamic data displayed in the Details. |
| Tabs | This section identifies the tabs across the top of the Cluster Node Details that provide access to additional information about the cluster node. |
| Cluster Notifications | Lists all notifications that have been defined for this cluster node. |

Starting/Stopping Cluster Nodes

For instructions on starting and stopping cluster nodes, see [Starting and Stopping Universal Controller](#).

Sending Notifications on Status of a Cluster Node

You can configure Cluster Nodes to send a notification via email or SNMP when the resource goes Offline or becomes Active.

| | |
|---------------|---|
| Step 1 | From the Agents and Connections navigation pane, select System > Cluster Nodes . The Cluster Nodes list displays. |
| Step 2 | Click the Details icon next to the Node ID of a Cluster Node, or click anywhere in the Cluster Node row, to display Details about the Cluster Node. |
| Step 3 | Click the Cluster Notifications tab to display a list of any Email and SNMP notifications configured for the Cluster Node. |
| Step 4 | Select the type of notification you want the Cluster Node to send, and then click New . Notification Details for a new Notification displays (see Email Notification Details and SNMP Notification Details , below). |

| | |
|---------------|--|
| Step 5 | <p>Complete the fields as needed (see Email Notification Details Field Descriptions and SNMP Notification Details Field Descriptions, below).</p> <div style="background-color: #ffffcc; padding: 10px; margin: 10px 0;"> <p> Note Cluster Node built-in variables are available to pass data about the Cluster Node into the notification. (User-defined variables, including Global variables, are not available for use in Cluster Node email notifications).</p> </div> |
| Step 6 | <p>Click the Save button to save the record.</p> |

Email Notification Details

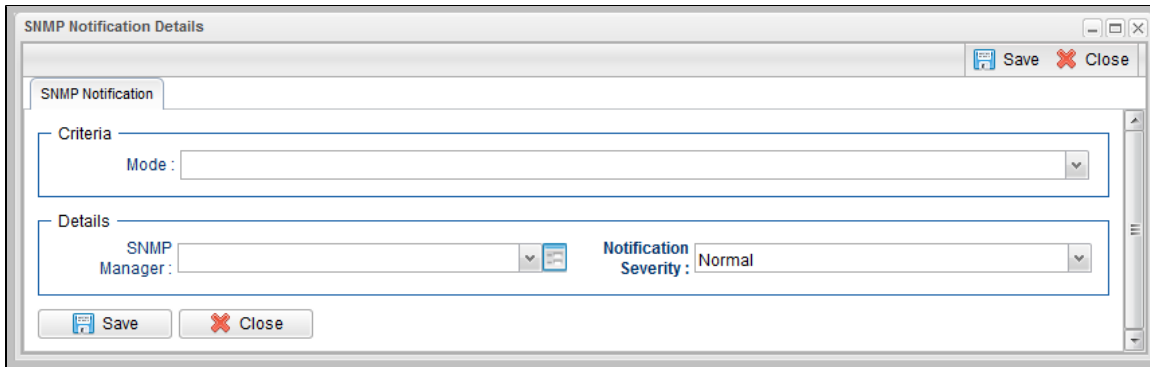

Email Notification Details Field Descriptions

The following table describes the fields and buttons on Email Notification Details.

| Field Name | Description |
|-----------------|---|
| Criteria | This section contains criteria for sending the notification. |
| Mode | Options: <ul style="list-style-type: none"> Offline = Trigger the notification when the cluster node goes offline. Active = Trigger the notification when the cluster node becomes active. Passive = Trigger the notification when the cluster node becomes passive. |
| Details | This section contains assorted detailed information about the notification. |

| | |
|--------------------|---|
| Email Template | <p>Name of an Email template defined in an Email Template Details. An Email template allows you to specify standard recipients and text for outgoing emails. Enter the name of an existing Email template, select an Email template from the drop-down list, or click the Details icon to create a new Email template.</p> <p>Every Email template specifies an Email connection. If you do not specify an Email template in this field, you must specify an Email connection in the Email Connection field.</p> <p>If you specify both an Email template (in this field) and an Email Connection, the Email server specified in the Email Connection field overrides the Email server specified in this field.</p> <p>(Any information specified in an Email task overrides what is specified in an Email template.)</p> |
| Email Connection | <p>Required if an Email Template is not specified in the Email Template field; name of an Email Connection. An Email Connection specifies information about an email server. Enter the name of an existing Email Connection, or click the magnifying glass to browse for an existing Email Connection or create a new Email Connection.</p> <p>If you specify both an Email Template and an Email Connection (in this field), the Email Connection specified in this field overrides the Email Connection specified in the Email Template field.</p> |
| Reply-To | <p>Email address of the sender. Use commas to separate multiple recipients. Variables and functions supported.</p> |
| To | <p>Email address of the recipient. Use commas to separate multiple recipients. Variables and functions supported.</p> |
| CC | <p>Email address of the party being sent a copy of the email, if any. Use commas to separate multiple recipients. Variables and functions supported.</p> |
| BCC | <p>Email address of the party being sent a blind (hidden) copy of the email, if any. Use commas to separate multiple recipients. Variables and functions supported.</p> |
| Subject | <p>Subject line of the email. Variables and functions supported.</p> |
| Body | <p>Text of the email message. Variables and functions supported. If both the email template and the email task contain text in the body, the text is appended.</p> |
| Buttons | <p>This section identifies the buttons displayed above and below the Notification Details that let you perform various actions.</p> |
| Save button | <p>Submits the new record to the database.</p> |
| Update | <p>Saves updates to the record.</p> |
| Delete | <p>Deletes the current record.</p> |
| Refresh | <p>Refreshes any dynamic data displayed in the Details.</p> |
| Close | <p>For pop-up view only; closes the pop-up view of this notification.</p> |

SNMP Notification Details

SNMP Notification Details Field Descriptions

The following table describes the fields and buttons on SNMP Notification Details.

| Field Name | Description |
|-----------------------|---|
| Criteria | This section contains criteria for sending the notification. |
| Mode | Options: <ul style="list-style-type: none"> • Offline = Trigger the notification when the cluster node goes offline. • Active = Trigger the notification when the cluster node becomes active. • Passive = Trigger the notification when the cluster node becomes passive. |
| Details | This section contains assorted detailed information about the notification. |
| SNMP Manager | The SNMP Manager that will receive the SNMP notification. |
| Notification Severity | Severity of this notification. Options: <ul style="list-style-type: none"> • Normal (1) • Warning (2) • Minor (3) • Major (4) • Critical (5) |
| Buttons | This section identifies the buttons displayed above and below the Notification Details that let you perform various actions. |
| Save button | Submits the new record to the database. |
| Update | Saves updates to the record. |
| Delete | Deletes the current record. |
| Refresh | Refreshes any dynamic data displayed in the Details. |
| Close | For pop-up view only; closes the pop-up view of this notification. |

Virtual Resources

- Overview
 - Using a Virtual Resource
- Creating a Virtual Resource
 - Virtual Resource Details
 - Virtual Resource Details Field Descriptions
- Assigning Tasks to a Virtual Resource
- Resetting a Renewable Virtual Resource

Overview

A virtual resource allows you to set up a throttling scheme that will manage the number of specific tasks that can run at one time.

Using a Virtual Resource

Outlined below is the basic procedure and processing flow for using a virtual resource:

| | |
|---------------|--|
| Step 1 | <p>Create a virtual resource.</p> <p>There are three types of virtual resources:</p> <ol style="list-style-type: none"> 1. Renewable: Resources that renew; that is, when a task has finished using them, they can be returned and made available to other tasks sharing the same resources. 2. Boundary: Resources that are like "windows." Only those tasks defined to fit through that window (or Resource Limit) will run. For example, if you define a Boundary Resource with Resource Limit of 5, and Task A requires a window (amount) of 5, Task B requires a window (amount) of 5, and Task C requires a window (amount) of 10, both A and B will run. However, C will go into a Resource Wait state. If the Boundary Resource is updated to a Resource Limit of 10, C will run. 3. Depletable: Resources that do not renew. Once consumed by a task, they are gone. |
| Step 2 | Assign a resource limit to the virtual resource as appropriate for the resource type. |
| Step 3 | Assign tasks to the virtual resource. |
| Step 4 | Specify the number of resource units that each task will consume. For example, a task that requires a small amount of processing power might consume one unit; a task that requires a high amount of resources might consume three units. The number of units you specify for each task is relative to the maximum number that you assign to the resource. |
| Step 5 | Save the virtual resource record. |
| Step 6 | <p>When a task with a virtual resource requirement launches, Universal Controller checks the virtual resource record to see if enough units are available to run the task, based on what other tasks assigned to that virtual resource are currently running.</p> <ul style="list-style-type: none"> • If enough units are available, the task runs and the number of available units is decremented by the amount specified in the task. For example, if the resource has a maximum of ten and the task uses two, the remaining amount available on that virtual resource for use by other tasks is eight. • If there are not enough units available, the task is put into Resource Wait status and is listed in the Outstanding Requests tab in the virtual resource. When the required amount of resource becomes available, the task is launched. • If multiple tasks are in Resource Wait status, the virtual resource priority is used to determine which task will be first to acquire the resource when it becomes available. |
| Step 7 | <p>Tabs on the Virtual Resource record keep track of tasks that are currently "running" on this virtual resource and tasks that are waiting to "run" on this virtual resource.</p> |

Creating a Virtual Resource

Step 1 From the **Automation Center** navigation pane, select **Other > Virtual Resources**. The Virtual Resources list displays:

Below the list, Virtual Resource Details for a new Virtual Resource record displays. (You also can click the **New** button to display Virtual Resource Details for a new Virtual Resource.)

The screenshot shows the 'Virtual Resources' interface. At the top, there is a list of 5 virtual resources. Below the list, the 'Virtual Resource Details' form is displayed, showing fields for Resource Name, Resource Type, Resource Description, Resource Limit, Resource Used, Updated By, and Updated. The form also includes tabs for 'Virtual Resource', 'Tasks', 'Currently In Use By', 'Outstanding Requests', and 'Versions'. The 'Details' tab is active, showing fields for Resource Name, Version, Resource Type, Resource Description, Member of Business Services, and Resource Used. There are 'Save' and 'New' buttons at the bottom of the form.

| Resource Name | Resource Type | Resource Description | Resource Limit | Resource Used | Updated By | Updated |
|--------------------------------|---------------|----------------------|----------------|---------------|---------------------|---------------------------|
| stonebranch-virtualresource-01 | Renewable | | 10 | 0 | stonebranch-user-02 | 2014-06-13 15:26:49 -0400 |
| stonebranch-virtualresource-02 | Renewable | | 10 | 0 | stonebranch-user-01 | 2014-06-13 15:26:54 -0400 |
| stonebranch-virtualresource-03 | Renewable | | 10 | 0 | stonebranch-user-02 | 2014-06-13 15:26:58 -0400 |
| stonebranch-virtualresource-04 | Renewable | | 10 | 0 | stonebranch-user-01 | 2014-06-13 15:27:01 -0400 |
| stonebranch-virtualresource-05 | Renewable | | 10 | 0 | stonebranch-user-02 | 2014-06-13 15:27:05 -0400 |

Step 2 Enter / select Details for a new Virtual Resource, using the **field descriptions** below as a guide.

- Required fields display in **boldface**.
- Default values for fields, if available, display automatically.

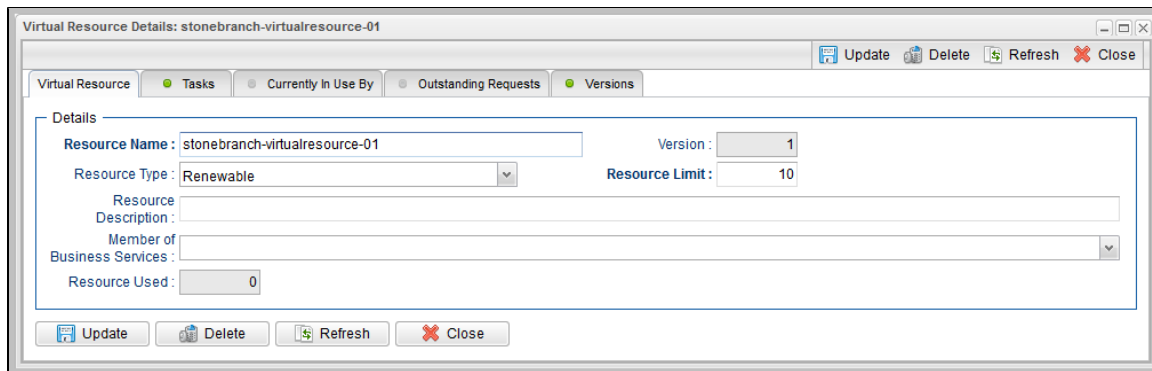

To display more of the Details fields on the screen, you can temporarily **hide the list**.

Note
 If you view **Virtual Resource Details** for an existing Virtual Resource by clicking a Virtual Resource in the list, and then want to create a new Virtual Resource record, you must click the **New** button that displays above and below the Details.

Step 3 Click the **Save** button. The Virtual Resource record is added to the database, and all buttons and tabs in the Virtual Resource Details are enabled.

Virtual Resource Details

The following Virtual Resource Details is for an existing Virtual Resource. See the **field descriptions**, below, for a description of all fields that display in the Virtual Resource Details.

 **Note**
 This sample Virtual Resource Details shows a Resource Limit of 1. Because each task has a minimum value of 1, this virtual resource would be limited to running only one task at a time.

Virtual Resource Details Field Descriptions

The following table describes the fields, buttons, and tabs that display in the Virtual Resource Details.

| Field Name | Description |
|-----------------------------|--|
| Details | This section contains detailed information about the Virtual Resource. |
| Resource Name | Name used within the Controller to identify this resource. Up to 40 alphanumeric. It is the responsibility of the user to develop a workable naming scheme for resources. |
| Version | System-supplied; version number of the current record, which is incremented by the Controller every time a user updates a record. Click the Versions tab to view previous versions. For details, see Record Versioning . |
| Resource Type | Type of resource. Options: <ul style="list-style-type: none"> • Renewable • Boundary • Depletable |
| Resource Limit | Maximum number of units available for this resource. |
| Resource Description | Description of this virtual resource. |
| Member of Business Services | User-defined; allows you to select one or more Business Services that this record belongs to. |
| Resource Used | If Resource Type = Renewable; system-supplied. Number of units currently in use, as of the time you opened the record. |
| Buttons | This section identifies the buttons displayed above and below the Virtual Resource Details that let you perform various actions. |
| Save | Saves a new record in the Controller database. |
| Update | Saves updates to the record. |
| New | Displays empty (except for default values) Details for creating a new Virtual Resource record. |

| | |
|-----------------------------|--|
| Delete | Deletes the current record. |
| Refresh | Refreshes any dynamic data displayed in the Details. |
| Close | For pop-up view only; closes the pop-up view of this record. |
| Tabs | This section identifies the tabs across the top of the Virtual Resource Details that provide access to additional information about the Virtual Resource. |
| Tasks | Lists tasks that are assigned to this virtual resource. |
| Currently In Use By | Lists the task instances that have acquired this virtual resource and the number of units acquired, at the time you opened this virtual resource record. |
| Outstanding Requests | Lists the task instances that are currently waiting to acquire this virtual resource, and the number of units required for each waiting task instance, at the time you opened this record. |
| Versions | Stores copies of all previous versions of the current record. See Record Versioning . |

Assigning Tasks to a Virtual Resource

Note

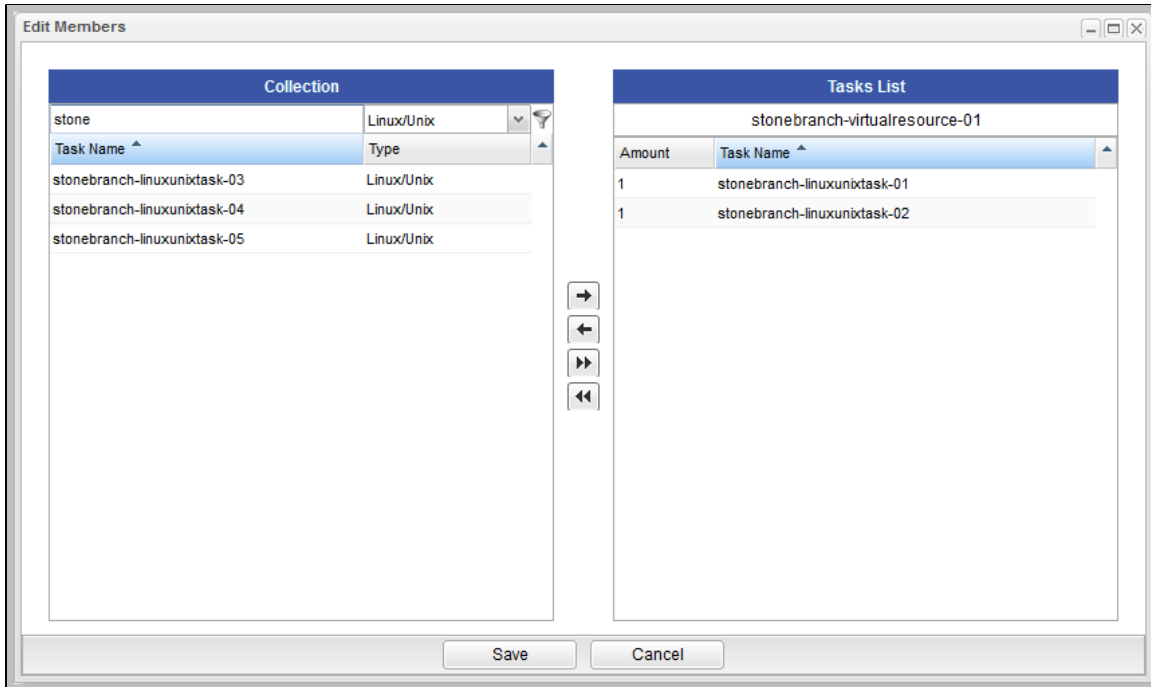

You can also assign a task to a virtual resource from a task Details.

Step 1 Open the Virtual Resource record that you want to assign tasks to.

Step 2 Click the Tasks tab. A list of any tasks assigned to the Virtual Resource displays.

| Task | Amount | Updated By | Updated |
|------------------------------|--------|---------------------|---------------------------|
| stonebranch-linuxunixtask-01 | 1 | stonebranch-user-02 | 2014-07-02 13:22:42 -0400 |
| stonebranch-linuxunixtask-02 | 1 | stonebranch-user-01 | 2014-07-02 13:22:43 -0400 |

Step 3 Click the **Edit** button. The Edit Members pop-up dialog displays:

- The **Collection** window lists tasks that are not assigned to this virtual resource.
- The **Tasks List** window lists tasks that refer to this virtual resource.

Step 4 To filter the Tasks listed in the Collection window, you can do either or both of the following:

- Enter characters in the text field above the **Task Name** column. Only tasks containing that sequence of characters will display in the list.
- Select a task type from the drop-down list above the **Type** column.

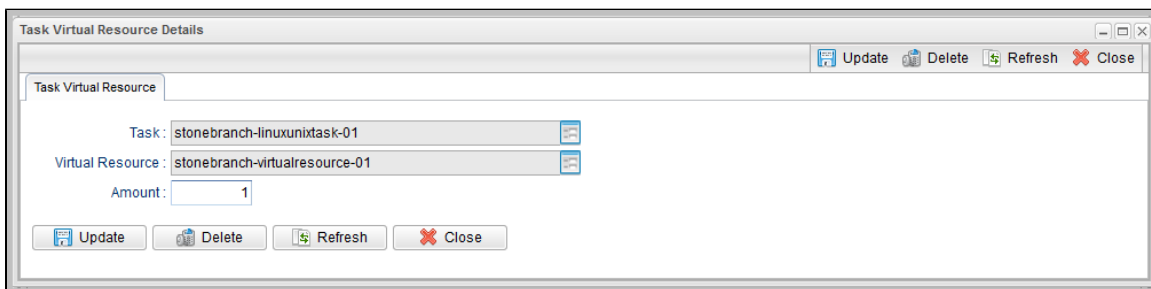

Step 5 To assign a task to the Virtual Resource, move the task from the **Collection** window to the **Tasks List** window:

1. To move a single task, double-click it or click it once and then click the -> arrow.
2. To move multiple tasks, Ctrl-click them and then click the > arrow.
3. To move all tasks, click the >> arrow.

To unassign a task to the Virtual Resource, move the task from the **Tasks List** windows to the **Collection** window:

1. To move a single task, double-click it or click it once and then click the <- arrow.
2. To move multiple tasks, Ctrl-click them and then click the < arrow.
3. To move all tasks, click the << arrow.

Step 6 The default **Amount** for each task assigned to a Virtual Resource is 1. To change the **Amount**, click the icon next to the **Task** name in the Tasks tab list or double-click anywhere in the task row. A Task Virtual Resource Details pop-up displays

Change the **Amount** as desired and click **Update**.

Step 7 Click **Save**.

Resetting a Renewable Virtual Resource

You can reset the **Resource Used** amount of a **Renewable** virtual resource to accurately reflect the actual number of resources **currently in use**.

Resetting a **Renewable** virtual resource requires the `ops_admin` role.

(For **Boundary** and **Depletable** virtual resources, the **Resource Used** amount is always reset to 0, as it does not apply to these types of virtual resources.)

Step 1 Access the **Action** menu for the Virtual Resource that you want to reset.

Step 2 Click **Reset Virtual Resource**.

The screenshot shows the 'Virtual Resources' management interface. At the top, there is a table with columns: Resource Name, Resource Type, Resource Description, Resource Limit, Resource Used, Updated By, and Updated. The table contains several rows of resources, all with a Resource Type of 'Renewable'. A context menu is open over the first row, with the 'Reset Virtual Resource' option highlighted. Below the table, there is a 'Virtual Resource Details' section with tabs for 'Virtual Resource', 'Tasks', 'Currently In Use By', 'Outstanding Requests', and 'Versions'. The 'Virtual Resource' tab is active, showing fields for Resource Name, Version (1), Resource Type (Renewable), Resource Limit (10), Resource Description, Member of Business Services, and Resource Used (0). At the bottom of the details section, there are buttons for Update, New, Delete, and Refresh.

This resets the **Resource Used** amount to the **Currently In Use By** value.

Scripts

- [Overview](#)
- [Creating a Script](#)
 - [Script Details](#)
 - [Script Details Field Descriptions](#)
- [Uploading a Script](#)

Overview

Scripts allows you to store scripts in the Universal Controller database.

There are three [types of scripts](#):

- Scripts
- UDM scripts
- SAP definition files

When a task that specifies a script is executed, the script is transmitted to the remote machine for execution.

**Note**

There is a 1MB limit on the content size of scripts, whether the content is defined in the Script Details or a uploaded from a local file system (see [Uploading a Script](#), below).

You can use scripts with the following task types: Windows, Linux/Unix, SAP, and File Transfer (UDM scripts for UDM File Transfer tasks).

You cannot import compiled executables into Scripts. The content of scripts must be text that can be processed by some shell, script host, or command interpreter.

You can embed Universal Controller [variables](#) in the script content. Embedded variables are resolved at trigger/run time before the script is sent to an Agent.

Controller variables can be passed as parameters, but the script still has to be written to parse the variables. However, you cannot pass variables as parameters that contain data longer than the parameter field (for example, SQL results).

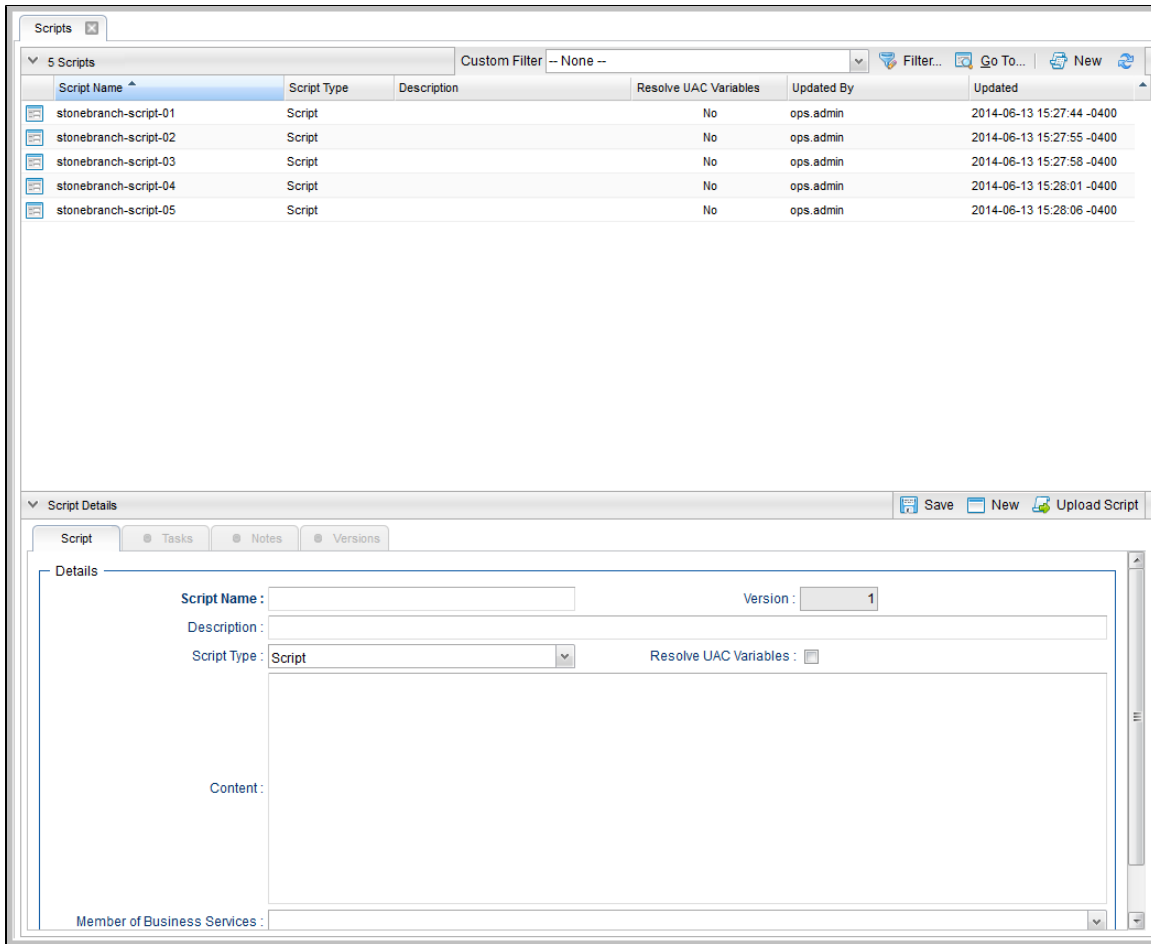

For example, the following script shows how a Controller variable could be used.

```
#!/bin/bash
echo Task Name: ${ops_task_name}
echo Task Instance: ${ops_task_id}
```

View the [Scripts video](#) to learn more about this feature.

Creating a Script

- Step 1** From the **Automation Center** navigation pane, select **Other > Scripts**. The Scripts list displays a list of all existing scripts. Below the list, Script Details for a new script displays. (You also can click the **New** button to display Script Details for a new Script.)

- Step 2** Enter / select Details for a new script, using the **field descriptions** below as a guide.

- Required fields display in **boldface**.
- Default values for fields, if available, display automatically.

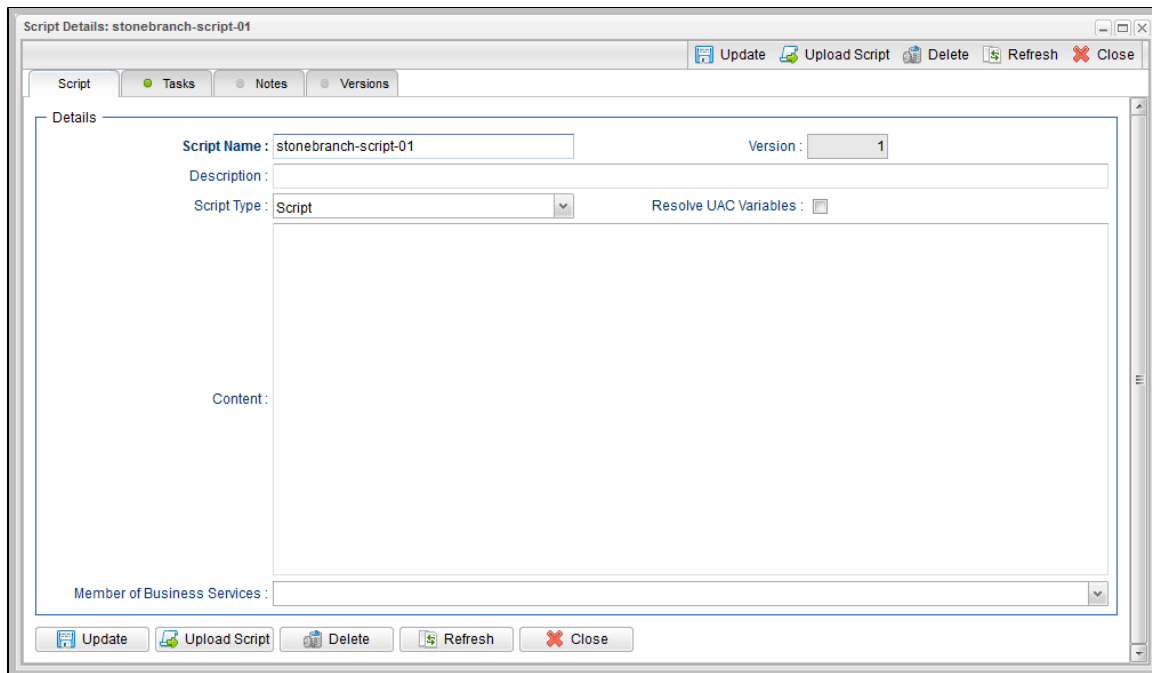

To display more of the Details fields on the screen, you can temporarily [hide the list](#).

 **Note**
If you view [Script Details](#) for an existing script by clicking a script in the list, and then want to create a new script, you must click the **New** button that displays above and below the Details.

- Step 3** Click the **Save** button. The script is added to the Controller database, and all buttons and tabs in the Script Details are enabled.

Script Details

The following Script Details is for an existing script. See the [field descriptions](#), below, for a description of all fields that display in the Script Details.

Script Details Field Descriptions

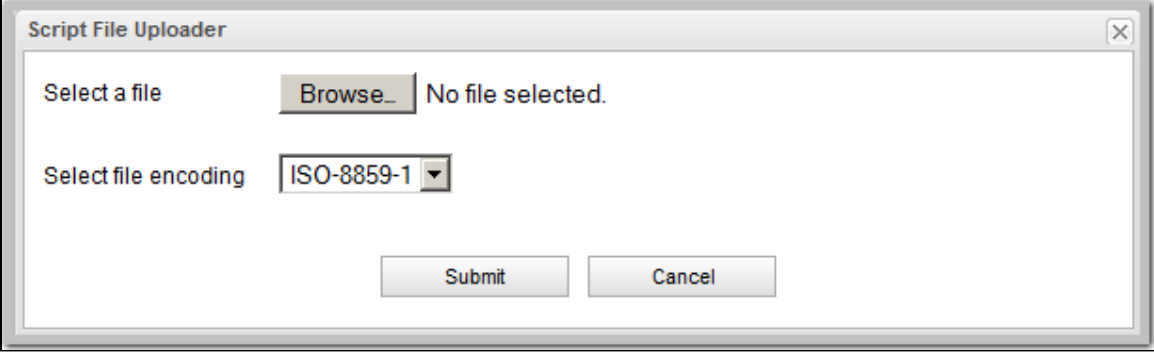

The following table describes the fields, buttons, and tabs that display in the Script Details.

| Field Name | Description |
|----------------|---|
| Details | This section contains detailed information about the Script. |
| Script Name | Name of the script. This name can be the same as the name of the script file. You also can specify a file extension; the default file extension for Windows is .bat . If the name has the extension .ps1 , Windows will run the script as a powershell script. You may have to create the appropriate file association and security for this to work. |
| Version | System-supplied; version number of the current record, which is incremented by the Controller every time a user updates a record. Click the Versions tab to view previous versions. For details, see Record Versioning . |
| Description | User-defined; description of this record. (Maximum = 200 characters.) |
| Script Type | Type of script. Options: <ul style="list-style-type: none"> • Script (for use in Windows or Linux/Unix tasks) • SAP Definition (for use in SAP tasks) • UDM Script (for use in UDM File Transfer tasks) |

| | |
|------------------------------|--|
| <p>Resolve UAC Variables</p> | <p>Controls whether or not the Script will be parsed in pursuit of Universal Controller variables. It allows the Controller to avoid the overhead of parsing a Script that does not contain variables.</p> <div style="background-color: #ffffcc; padding: 10px; margin: 10px 0;"> <p> Note Variables <i>could</i> be embedded with this field disabled; likewise, you could have a Script with no variables but have this field enabled. However, enabling this field for a Script that does not contain Controller variables will impose an unnecessary burden (however small) on the Controller.</p> </div> |
| <p>Content</p> | <p>Content of the script or SAP definition file.</p> <p>You can enter content manually or upload content from the local file system by using the Upload Script button.</p> <p>For UDM Scripts, Source and Destination credentials are available for use. The credentials can be coded into the UDM script using the following File Transfer variables:</p> <ul style="list-style-type: none"> • ops_src_cred_user • ops_src_cred_pwd • ops_dst_cred_user • ops_dst_cred_pwd <p>The variables will be resolved by UDM internally. The following example illustrates the correct way to code them:</p> <div style="border: 1px solid #ccc; padding: 10px; margin: 10px 0;"> <pre>open_src=srcserver user=\$(ops_src_cred_user) pwd=\$(ops_src_cred_pwd) dst=dstserver user=\$(ops_dst_cred_user) pwd=\$(ops_dst_cred_pwd)</pre> </div> <p>The values for these variables are sent to UDM via stdin. This provides a secure channel where the credentials never show up in the script or on the command line.</p> |
| <p>Buttons</p> | <p>This section identifies the buttons displayed above and below the Script Details that let you perform various actions.</p> |
| <p>Save</p> | <p>Saves a new script record in the Controller database.</p> |
| <p>Update</p> | <p>Saves updates to the record.</p> |
| <p>New</p> | <p>Displays empty (except for default values) Details for creating a new script.</p> |
| <p>Upload Script</p> | <p>Allows you to upload a script from the local file system and place it in the Content field (see Uploading a Script, below).</p> |
| <p>Delete</p> | <p>Deletes the current record.</p> |
| <p>Refresh</p> | <p>Refreshes any dynamic data displayed in the Details.</p> |
| <p>Close</p> | <p>For pop-up view only; closes the pop-up view of this task.</p> |
| <p>Tabs</p> | <p>This section identifies the tabs across the top of the Script Details that provide access to additional information about the script.</p> |
| <p>Tasks</p> | <p>Lists of all tasks using this script.</p> |
| <p>Notes</p> | <p>Lists all notes associated with this record.</p> |
| <p>Versions</p> | <p>Stores copies of all previous versions of the current record. See Record Versioning.</p> |

Uploading a Script

To upload a script into the [Content](#) field in the Script Details:

| | |
|----------------------|---|
| <p>Step 1</p> | <p>Click the Upload Script button. The Script File Uploader pop-up displays.</p>  |
| <p>Step 2</p> | <p>Click the Browse... button and select a script from the local file system.</p> |
| <p>Step 3</p> | <p>From the Select file encoding drop-down list, select the character set of the script: ISO-8859-1, US-ASCII, UTF-8, UTF-16, UTF-16BE, or UTF-16LE.</p> |
| <p>Step 4</p> | <p>Click the Submit button to add the script to the Content field.</p> |

Email Templates

- Overview
- Creating an Email Template
 - Email Template Details
 - Email Template Details Field Descriptions

Overview

Email templates allow you to construct commonly-used information that can be copied to create [Email tasks](#).

If an Email task specifies a template, Universal Controller uses the information in the template to construct and execute the Email task. Any information specified in the task overrides what is specified in the template.

Creating an Email Template

Step 1 From the [Agents & Connections](#) navigation pane, select **System > Email Templates**. The Email Templates list displays.

Below the list, Email Template Details for a new Email Template displays. (You also can click the **New** button to display Email Template Details for a new Email Template.)

| | |
|---------------|---|
| Step 2 | <p>Enter / select Details for a new Email Template, using the field descriptions below as a guide.</p> <ul style="list-style-type: none"> • Required fields display in boldface. • Default values for fields, if available, display automatically. <p>To display more of the Details fields on the screen, you can temporarily hide the list.</p> <div style="background-color: #ffffcc; padding: 10px; margin-top: 10px;"> <p> Note If you view Email Template Details for an existing Email Template by clicking an Email Template in the list, and then want to create a new Email Template, you must click the New button that displays above and below the Details.</p> </div> |
| Step 3 | <p>Click the Save button. The Email Template is added to the database, and all buttons and tabs in the Email Template Details are enabled.</p> |

Email Template Details

The following Email Template Details is for an existing Email Template. See the [field descriptions](#), below, for a description of all fields that display in the Email Template Details.

Email Template Details Field Descriptions

The following table describes the fields, buttons, and tabs that display in the Email Template Details.

| Field Name | Description |
|------------------|---|
| Details | This section contains detailed information about the Email Template. |
| Template Name | Name used within the Controller to identify this resource. Up to 40 alphanumeric. It is the responsibility of the user to develop a workable naming scheme for resources. |
| Version | System-supplied; version number of the current record, which is incremented by the Controller every time a user updates a record. Click the Versions tab to view previous versions. For details, see Record Versioning . |
| Email Connection | Required; name of an Email connection defined via the Email Connection Details. An email connection specifies information about an email server. Enter the name of an existing Email connection, select an Email Connection from the drop-down list of all existing Email Connections, or click the Details icon to create an Email Connection. |

| | |
|---------------------|--|
| Reply-To | Email address of the sender. Use commas to separate multiple recipients. Variables and functions supported. |
| To | Email address of the recipient. Use commas to separate multiple recipients. Variables and functions supported. |
| CC | Email address of the party being sent a copy of the email, if any. Use commas to separate multiple recipients. Variables and functions supported. |
| BCC | Email address of the party being sent a blind (hidden) copy of the email, if any. Use commas to separate multiple recipients. Variables and functions supported. |
| Subject | Subject line of the email. Variables and functions supported. |
| Body | Text of the email message. Variables and functions supported. If both the email template and the email task contain text in the body, the text is appended. |
| Buttons | This section identifies the buttons displayed above and below the Email Template Details that let you perform various actions. |
| Save | Saves a new Email Template record in the Controller database. |
| Update | Saves updates to the record. |
| New | Displays empty (except for default values) Details for creating a new Email Template. |
| Delete | Deletes the current record. |
| Refresh | Refreshes any dynamic data displayed in the Details. |
| Close | For pop-up view only; closes the pop-up view of this Email Template. |
| Tabs | This section identifies the tabs across the top of the Email Template Details that provide access to additional information about the Email Template. |
| Versions tab | Stores copies of all previous versions of the current record. See Record Versioning . |

Email Connections

- [Overview](#)
- [Creating an Email Connection](#)
 - [Email Connection Details](#)
 - [Email Connection Details Field Descriptions](#)

Overview

Email connections provide all of the email server information necessary for Universal Controller to send emails.

Email connections are used these ways within the Controller:

- An [Email Task](#) uses the Email connection to generate emails independent of tasks.
- An [Email Notification](#) uses the Email connection to generate notifications related to tasks.
- [Agents](#), [OMS Servers](#), and [Cluster Nodes](#) use the Email connection to generate email notifications.
- [System Operations](#) use Email connections to generate system notifications.

Creating an Email Connection

Step 1 From the [Agents & Connections](#) navigation pane, select **System > Email Connections**. The Email Connections list displays.

Below the list, Email Connection Details for a new Email Connection displays. (You also can click the **New** button to display Email Connection Details for a new Email Connection.)

Step 2 Enter / select Details for a new Email Connection, using the [field descriptions](#) below as a guide.

- Required fields display in **boldface**.
- Default values for fields, if available, display automatically.

To display more of the Details fields on the screen, you can temporarily [hide the list](#).

Note
 If you view [Email Connection Details](#) for an existing Email Connection by clicking an Email Connection in the list, and then want to create a new Email Connection, you must click the **New** button that displays above and below the Details.

Step 3 Click the **Save** button. The Email Connection is added to the database, and all buttons and tabs in the Email Connection Details are enabled.

Email Connection Details

The following Email Connection Details is for an existing Email Connection. See the [field descriptions](#), below, for a description of all fields that display in the Email Connection Details.

Email Connection Details Field Descriptions

The following table describes the fields, buttons, and tabs that display in the Email Connection Details.

| Field Name | Description |
|-----------------------------|---|
| Details | This section contains detailed information about the Email Connection. |
| Connection Name | Name (maximum 40 alphanumeric characters) used within the Controller to identify this resource. It is the responsibility of the user to develop a workable naming scheme for resources. |
| Version | System-supplied; version number of the current record, which is incremented by the Controller very time a user updates a record. Click the Versions tab to view previous versions. For details, see Record Versioning . |
| Outgoing Mail Server (SMTP) | Name or IP address of the outgoing email server. |
| SMTP Port | Port on the machine where the email server resides. |

| | |
|------------------------------|--|
| Enable SSL | Enables SSL connectivity for your SMTP server. |
| Enable STARTTLS | Enables the use of the STARTTLS command (if supported by the server) to switch the connection to a TLS-protected connection before issuing any login commands. (An appropriate trust store must be configured so that the client will trust the server's certificate.) |
| Email Address | <p>Email address of the sender.</p> <div style="background-color: #f8d7da; padding: 10px; border: 1px solid #f5c6cb;"> <p> Warning If the selected sender email address is invalid, or becomes invalid at any time after you create an Email Connection, all Email Notifications that specify that Email Connection will fail, but no warning will be issued. You must click the Test Connection button to test the Email Connection, which will generate an error message in the Controller Console.</p> </div> |
| Authentication Req'd | If enabled, User Name and Password are required. |
| User Name | If Authentication Req'd is enabled; user name that the Controller will use to connect to the server. |
| Password | If Authentication Req'd is enabled; password that the Controller will use to connect to the server. |
| Use for System Notifications | <p>Indicates whether or not this Email Connection is to be used for system notifications.</p> <div style="background-color: #fff3cd; padding: 10px; border: 1px solid #ffeeba;"> <p> Note Only one Email Connection can be used for system notifications. If this field is checked in an Email Connection Details, it will appear unchecked on all other Email Connection Details. If you then check this field in another Email Connection Details, it automatically will be unchecked from the Details in which it had been checked.</p> </div> |
| Buttons | This section identifies the buttons displayed above and below the Email Connection Details that let you perform various actions. |
| Save | Saves a new Email Connection record in the Controller database. |
| Update | Saves updates to the record. |
| New | Displays empty (except for default values) Details for creating a new Email Connection. |
| Test Connection | After saving the record to the database, click Test Connection to run a connection test. |
| Delete | Deletes the current record. |
| Refresh | Refreshes any dynamic data displayed in the Details. |
| Close | For pop-up view only; closes the pop-up view of this Email Connection. |
| Tabs | This section identifies the tabs across the top of the Email Connection Details that provide access to additional information about the Email Connection. |
| Email Tasks | Provides a list of tasks that use this email server. |

Database Connections

- Overview
- Creating a Database Connection
 - Database Connection Details
- Database Connection Details Field Descriptions

Overview

Database Connections provide all database server information required for Universal Controller to execute an SQL task or a Stored Procedure Task.

Creating a Database Connection

Step 1 From the Agents & Connections navigation pane, select **System > Database Connections**. The Database Connections list displays.

Below the list, Database Connection Details for a new Database Connection displays. (You also can click the **New** button to display Database Connection Details for a new Database Connection.)

The screenshot shows the 'Database Connections' interface. At the top, there is a list of 5 database connections. Below the list, the 'Database Connection Details' panel is open, showing fields for Connection Name, Description, Database Type (MySQL), Connection URL, Driver (com.mysql.jdbc.Driver), Credentials, and Maximum Rows (100). The interface includes buttons for 'Save', 'New', and 'Test Connection'.

| Connection Name | Database Type | Description | Connection URL | Driver | Credentials | Updated By | Updated |
|-----------------------------------|---------------|-------------|---|-----------------------|-------------|---------------------|---------------------------|
| stonebranch-databaseconnection-01 | MySQL | | jdbc:mysql://<server>-<port3306>/<database> | com.mysql.jdbc.Driver | | stonebranch-user-01 | 2014-06-13 15:32:24 -0400 |
| stonebranch-databaseconnection-02 | MySQL | | jdbc:mysql://<server>-<port3306>/<database> | com.mysql.jdbc.Driver | | stonebranch-user-02 | 2014-06-13 15:32:32 -0400 |
| stonebranch-databaseconnection-03 | MySQL | | jdbc:mysql://<server>-<port3306>/<database> | com.mysql.jdbc.Driver | | stonebranch-user-03 | 2014-06-13 15:32:38 -0400 |
| stonebranch-databaseconnection-04 | MySQL | | jdbc:mysql://<server>-<port3306>/<database> | com.mysql.jdbc.Driver | | stonebranch-user-04 | 2014-06-13 15:32:39 -0400 |
| stonebranch-databaseconnection-05 | MySQL | | jdbc:mysql://<server>-<port3306>/<database> | com.mysql.jdbc.Driver | | stonebranch-user-05 | 2014-06-13 15:32:43 -0400 |

Step 2 Enter / select Details for a new Database Connection, using the field descriptions below as a guide.

- Required fields display in **boldface**.
- Default values for fields, if available, display automatically.

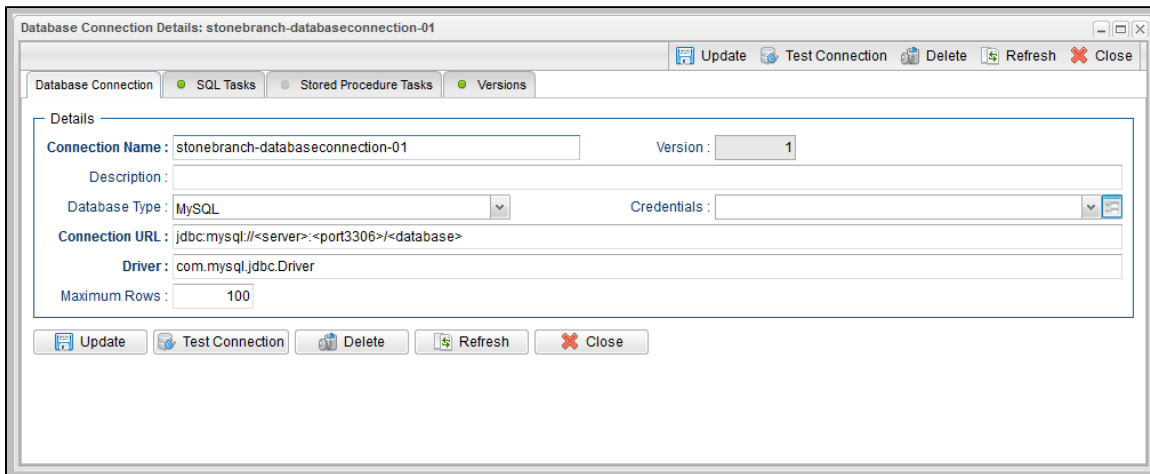

To display more of the Details fields on the screen, you can temporarily [hide the list](#).

Note
 If you view [Database Connection Details](#) for an existing Database Connection by clicking a Database Connection in the list, and then want to create a new Database Connection, you must click the **New** button that displays above and below the Details.

Step 3 Click the **Save** button. The Database Connection is added to the database, and all buttons and tabs in the Database Connection Details are enabled.

Database Connection Details

The following Database Connection Details is for an existing Database Connection. See the [field descriptions](#), below, for a description of all fields that display in the Database Connection Details.

Database Connection Details Field Descriptions

The following table describes the fields, buttons, and tabs that display in the Database Connection Details.

| Field Name | Description |
|-----------------|--|
| Details | This section contains detailed information about the Database Connection. |
| Connection Name | Name (maximum 40 alphanumeric characters) used within the Controller to identify this resource. It is the responsibility of the user to develop a workable naming scheme for resources. |
| Version | System-supplied; version number of the current record, which is incremented by the Controller every time a user updates a record. Click the Versions tab to view previous versions. For details, see Record Versioning . |
| Description | Optional. Description of the database. |

| | |
|------------------------|---|
| Database Type | Type of database. Options: <ul style="list-style-type: none"> • MySQL • MS SQL Server • Oracle • DB2 • Sybase SQL Anywhere • Other <div style="background-color: #ffffcc; padding: 10px; margin-top: 10px;">  Note When using the database type Other, you will need to source the JDBC driver from your database vendor. Simply place the JDBC driver .jar file into the <code>\$TOMCAT_HOME/webapps/opswise/WEB-INF/lib</code> directory and restart Tomcat. Format the Connection URL and Driver fields per the database vendor's documentation. </div> |
| Credentials | Credentials under which an Agent runs this task. These credentials override any credentials provided in the Agent resource definition for any Agent running this task. |
| Connection URL | URL of the database. If you are using a MySQL database and want the ability to issue multiple SQL commands from a single task, you need to enable this by appending the following string to the end of the connection string: <div style="border: 1px solid #ccc; padding: 5px; margin: 10px 0; text-align: center;"> ?allowMultiQueries=true </div> For example: <div style="border: 1px solid #ccc; padding: 5px; margin: 10px 0; text-align: center;"> jdbc:mysql://localhost:3306/opswise?allowMultiQueries=true </div> |
| Driver | Name of the JDBC driver. |
| Maximum Rows | If necessary, specifies a limit to the number of rows you want returned by the SQL statement. |
| Buttons | This section identifies the buttons displayed above and below the Database Connection Details that let you perform various actions. |
| Save | Saves a new Database Connection record in the Controller database. |
| Update | Saves updates to the record. |
| New | Displays empty (except for default values) Details for creating a new Database Connection. |
| Test Connection | After saving the record to the database, click Test Connection to run a connection test. |
| Delete | Deletes the current record. |
| Refresh | Refreshes any dynamic data displayed in the Details. |
| Close | For pop-up view only; closes the pop-up view of this Database Connection. |
| Tabs | This section identifies the tabs across the top of the Database Connection Details that provide access to additional information about the Database Connection. |

| | |
|-------------------------------|---|
| SQL Tasks | Lists all SQL tasks that are using this Database Connection. |
| Stored Procedure Tasks | Lists all Stored Procedure tasks that are using this Database Connection. |
| Versions | Stores copies of all previous versions of the current record. See Record Versioning . |

SAP Connections

- Overview
- Creating an SAP Connection
 - SAP Connection Details
 - SAP Connection Details Field Descriptions

Overview

SAP Connections provide all the SAP server information necessary for Universal Controller to execute an **SAP Task** on an SAP system. These instructions assume the user is familiar with SAP.

Creating an SAP Connection

Step 1 From the **Agents & Connections** navigation pane, select **System > SAP Connections**. The SAP Connections list displays.

Below the list, SAP Connection Details for a new SAP Connection displays. (You also can click the **New** button to display SAP Connection Details for a new SAP Connection.)

Step 2 Enter / select Details for a new SAP Connection, using the [field descriptions](#) below as a guide.

- Required fields display in **boldface**.
- Default values for fields, if available, display automatically.

To display more of the Details fields on the screen, you can temporarily [hide the list](#).

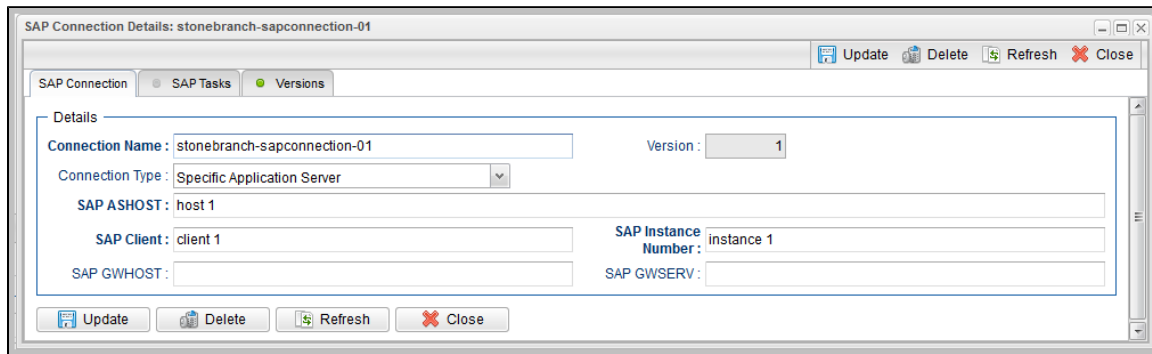

Note

If you view [SAP Connection Details](#) for an existing SAP Connection by clicking an SAP Connection in the list, and then want to create a new SAP Connection, you must click the **New** button that displays above and below the Details.

Step 3 Click the **Save** button. The SAP Connection is added to the database, and all buttons and tabs in the SAP Connection Details are enabled.

SAP Connection Details

The following SAP Connection Details is for an existing SAP Connection. See the [field descriptions](#), below, for a description of all fields that display in the SAP Connection Details.

SAP Connection Details Field Descriptions

The following table describes the fields, buttons, and tabs that display in the SAP Connection Details.

| Field Name | Description |
|-----------------|--|
| Details | This section contains detailed information about the SAP Connection. |
| Connection Name | Name (maximum 40 alphanumeric characters) used within the Controller to identify this resource. It is the responsibility of the user to develop a workable naming scheme for resources. |
| Version | System-supplied; version number of the current record, which is incremented by the Controller every time a user updates a record. Click the Versions tab to view previous versions. For details, see Record Versioning . |
| Connection Type | Type of SAP connection. Options: <ul style="list-style-type: none"> • Specific Application Server Connection to a specific SAP application server (type A RFC connection). • Load Balancing Connection to an SAP system where the application server is determined by load balancing (type B RFC connection). |
| SAP ASHOST | If Connection Type = Specific Application Server; host name of an SAP application server. If the path to the server goes through SAP routers, prefix the host name with the SAP router string. |

| | |
|----------------------|---|
| SAP Client | If Connection Type = Specific Application Server; SAP Client number. |
| SAP Instance Number | If Connection Type = Specific Application Server; SAP instance number. |
| SAP GWHOST | If Connection Type = Specific Application Server; host name of the SAP gateway. |
| SAP GWSERV | If Connection Type = Specific Application Server; service name of the SAP gateway. |
| System ID | If Connection Type = Load Balancing; system ID of the SAP system to which you want to connect. |
| Message Server | If Connection Type = Load Balancing; host name of the message server. |
| Group | If Connection Type = Load Balancing; application servers group name. |
| Buttons | This section identifies the buttons displayed above and below the SAP Connection Details that let you perform various actions. |
| Save | Saves a new SAP Connection record in the Controller database. |
| Update | Saves updates to the record. |
| New | Displays empty (except for default values) Details for creating a new SAP Connection. |
| Delete | Deletes the current record. |
| Refresh | Refreshes any dynamic data displayed in the Details. |
| Close | For pop-up view only; closes the pop-up view of this SAP Connection. |
| Tabs | This section identifies the tabs across the top of the SAP Connection Details that provide access to additional information about the SAP Connection. |
| SAP Tasks tab | Lists all SAP tasks that use this SAP connection. |
| Versions tab | Stores copies of all previous versions of the current record. See Record Versioning . |

SNMP Managers

- Overview
- Creating an SNMP Manager
 - SNMP Manager Details
 - SNMP Manager Details Field Descriptions
- MIB File
 - MIB and SNMP Protocol
 - MIB File Location

Overview

SNMP Managers are the network managers to which Universal Controller sends [SNMP notifications](#).

SNMP Managers can receive SNMP notifications when:

- An [Agent](#) or [OMS Server](#) goes down or comes back up.
- A [Cluster Node](#) goes Offline or becomes Active.
- An [SNMP Notification](#) is associated with a task.

Note

SNMP Notifications on Cluster Nodes cannot be exported; therefore, they cannot be imported. You must set up new SNMP Notifications for Cluster Nodes whenever an [export](#) / [import](#) has been run.

Creating an SNMP Manager

Step 1 From the **Agents & Connections** navigation pane, select **System > SNMP Managers**. The SNMP Managers list displays.

Below the list, SNMP Manager Details for a new SNMP Manager displays. (You also can click the **New** button to display SNMP Manager Details for a new SNMP Manager.)

The screenshot shows the 'SNMP Managers' interface. At the top, there is a tab labeled 'SNMP Managers' and a dropdown menu showing '5 SNMP Managers'. Below this is a table with columns: Manager Name, Manager Address, Manager Port, Updated By, and Updated. The table contains five entries, all with Manager Address '1.2.3.4' and Manager Port '162'. Below the table is a section titled 'SNMP Manager Details' with a 'Save' button and a 'New' button. The details form has fields for 'Manager Name', 'Manager Address', and 'Manager Port' (with a default value of '162'). There is also a 'Version' field with a default value of '1'.

| Manager Name | Manager Address | Manager Port | Updated By | Updated |
|----------------------------|-----------------|--------------|---------------------|---------------------------|
| stonebranch-snmpmanager-01 | 1.2.3.4 | 162 | stonebranch-user-01 | 2014-06-13 15:35:21 -0400 |
| stonebranch-snmpmanager-02 | 1.2.3.4 | 162 | stonebranch-user-02 | 2014-06-13 15:35:30 -0400 |
| stonebranch-snmpmanager-03 | 1.2.3.4 | 162 | stonebranch-user-03 | 2014-06-13 15:35:34 -0400 |
| stonebranch-snmpmanager-04 | 1.2.3.4 | 162 | stonebranch-user-04 | 2014-06-13 15:35:37 -0400 |
| stonebranch-snmpmanager-05 | 1.2.3.4 | 162 | stonebranch-user-05 | 2014-06-13 15:35:42 -0400 |

Step 2 Enter / select Details for a new SNMP Manager, using the [field descriptions](#) below as a guide.

- Required fields display in **boldface**.
- Default values for fields, if available, display automatically.

To display more of the Details fields on the screen, you can temporarily [hide the list](#).

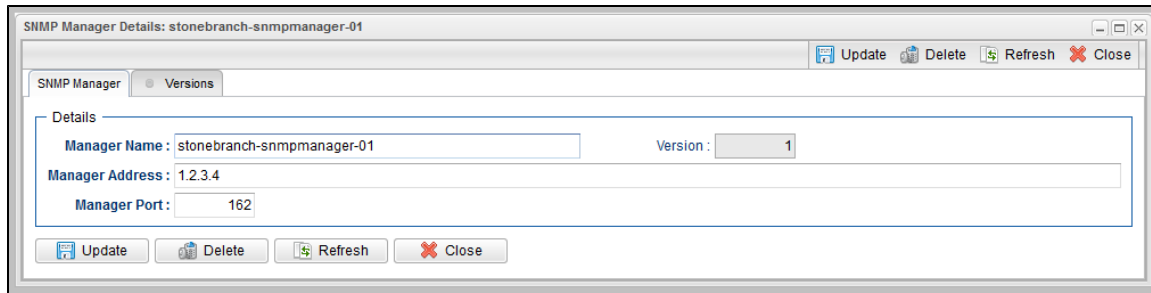

Note

If you view [SNMP Manager Details](#) for an existing SNMP Manager by clicking an SNMP Manager in the list, and then want to create a new SNMP Manager, you must click the **New** button that displays above and below the Details.

Step 3 Click the **Save** button. The SNMP Manager is added to the database, and all buttons and tabs in the SNMP Manager Details are enabled.

SNMP Manager Details

The following SNMP Manager Details is for an existing SNMP Manager. See the [field descriptions](#), below, for a description of all fields that display in the SNMP Manager Details.

SNMP Manager Details Field Descriptions

The following table describes the fields, buttons, and tabs that display in the SNMP Manager Details.

| Field Name | Description |
|---------------------|--|
| Details | This section contains detailed information about the SNMP Manager. |
| Manager Name | Name used within the Controller to identify this resource. Up to 40 alphanumeric. It is the responsibility of the user to develop a workable naming scheme for resources. |
| Version | System-supplied; version number of the current record, which is incremented by the Controller every time a user updates a record. Click the Versions tab to view previous versions. For details, see Record Versioning . |
| Manager Address | Name or IP address of the SNMP Manager. |
| Manager Port | Port used by the SNMP Manager. |
| Buttons | This section identifies the buttons displayed above and below the SNMP Manager Details that let you perform various actions. |
| Save | Saves a new SNMP Manager record in the Controller database. |
| Update | Saves updates to the record. |
| New | Displays empty (except for default values) Details for creating a new SNMP Manager. |
| Delete | Deletes the current record. |
| Refresh | Refreshes any dynamic data displayed in the Details. |
| Close | For pop-up view only; closes the pop-up view of this SNMP Manager. |
| Tabs | This section identifies the tabs across the top of the SNMP Manager Details that provide access to additional information about the SNMP Manager. |
| Versions tab | Stores copies of all previous versions of the current record. See Record Versioning . |

MIB File

A MIB file contains the translation of the [SNMP notifications](#) sent to the SNMP Manager by the Controller.

A sample MIB file, `OPSWISE.MIB.txt`, is shipped with all Universal Agent for Windows and UNIX packages.

MIB and SNMP Protocol

SNMP protocol is a simple UDP package containing a set of dot-separated characters defined as ObjectID.

You can use the MIB file to set up the corresponding options Tree; the numbers will tell the server which line to go down. You then can look up inside the server for those results or, more importantly, define alerts on the decision option of the tree-structure that you defined with the MIN file.

If you have a more graphical server, you also may have a GUI showing the different parts of your trees in diagrams or other types of reporting.

SNMP protocol is, in effect, an external Alarm/(simple up to rather complex) Reporting System that searches for the Return Code (Success or Failure) of a task, rather than the actual output of the task. It could tell the Operator, for example: the Return Code is not as expected, add paper to the printer, the machine is low on disk space, or the server just booted up. These messages can be as descriptive as defined and, of course, will depend on the logging capability of the corresponding manager, which in our case is the Controller. It can be thought of as a centralized Information system, where quite a lot of tools and hardware can use for status exchange.

MIB File Location

The MIB file for both UNIX and Windows are included in the **samp** directory (UNIX) and **samples** directory (Windows) for Universal Automation Center Agent (UAG):

| | |
|----------------|---|
| UNIX | /opt/universal/uagsrv/samp |
| Windows | \Program Files\Universal\UAGSrv\samples |
